Integrated Coastal Resources  
Database (ICRD)

---

March 2013

**Water Resources Planning Organization**

## Preface

The Water Resources Planning Organization (WARPO) under the ministry of water resources is responsible for macro level water resources planning and management in Bangladesh. One of the important responsibilities of WARPO is to update and maintain the National Water Resources Database (NWRD) setup during development of National Water Management Plan. Subsequently Integrated Coastal Resources Database has been developed during preparation of Integrated Coastal Zone Management Plan which is kept as sub-set database under NWRD. Both the databases are strategically important at national and regional level development activities in Bangladesh. These databases are being used in national and regional level planning, study and research initiated by the public and private agencies. WARPO has the intention to disseminate and make available to the wider user group for the benefit of the country for efficient natural resources planning and management.

The NWRD is organized into data groups like Base Data, Surface water, Groundwater, Soil and Agriculture, Fisheries, Forest, Socio-economic, Meteorological, Documents and Reports, Environment and Images. Similarly, ICRD a subset of NWRD, has category of data into Natural Resources and Environment, Human beings and Social Conditions, Infrastructure and Services, Economics and Finance, Administration and Institutions, Funds and Interventions etc. At present, the total no. of data layers in both NWRD and ICRD are about 1000.

WARPO has taken an initiative to prepare a data catalogue for reviewing and quick understanding of each data layers in an organized way. These data layers are arranged by groups and name with brief description. A sample, attribute information, bundle Information has also been included in this data catalogue. This data catalogue will be very helpful for beneficiaries and stakeholders.

## Table of Content

<b>Administration and Institutions (ADM)</b> .....	<b>19</b>
1 Administrative Units of the Coastal Zone .....	21
2 Coastal District Boundry .....	22
3 Coastal Upazila/Thana Boundry.....	24
4 Coastal Union Boundry .....	25
5 DEM of Coastal Zone.....	26
6 DEM of Sundarban .....	27
7 Districts and Upazilas of the Coastal Zone.....	29
8 Protected Areas .....	30
9 Soil Map of Coastal Zone .....	31
10 Guidelines for PC in CDSP .....	32
11 Guidelines for Selection of Fishing Villages of ECFC Project.....	33
12 Guidelines for SPC in CDSP.....	34
13 Guidelines of CDSP, GPP, and GPWM for Local Level Institutions .....	35
14 O&M Guidelines for WMC in CDSP.....	36
15 Amount Invested in IGAs in the KJDRP up to September 2002 .....	37
16 Assessed Value, WMO Contribution and Per Member Resource Endowment in the KJDRP .....	38
17 Break Down of Funds Raised under WMOs by Zone in the KJDRP (up to September 2002) .....	39
18 Changes of WMA - WMF Committees and other Issues by Zones .....	40
19 Distribution of Assets Leased to WMAs.....	41
20 Credit Distribution in Upazila by BRDB .....	42
21 Domains of Local Level Institutions of CDSP.....	44
22 Draft by-laws of WMF (in Bangla) in KJDRP .....	45
23 Information Campaign Materials Distributed by Types in the KJDRP up to September 2002 .....	46
24 LADC Information for Jan 2002-Jun 2003 in CDSP .....	47
25 Leasing Agreement of Properties between BWDB-WMA .....	48
26 Local Level Institutions of CDSP Areas .....	49
27 Major Milestones Related to Institutional Development in KJDRP .....	50
28 Management Guidelines for Leased Properties .....	51

29	Meetings and Consultations Held in KJDRP .....	52
30	Number of Beneficiaries who Received Training in the KJDRP .....	53
31	Relation of VOs with Different Interest Groups and Institutions .....	54
32	Sample by-laws of WMA (in Bangla) in KJDRP .....	55
33	SPC Information for Jan 2002 - June 2003 in the CDSP .....	56
34	Status of VOs and VDCs as of June 2003 in ECFC.....	57
35	Structure of PC and SPC .....	58
36	Summary of Total WMO Funds as per September 2002 .....	59
37	Types of Institutions Facilitated by ECFC Project.....	60
38	Water Management System of CDSP .....	61
39	Administrative Units and Average Area.....	62
40	Coverage of Selected Government Projects for the Urban Poor.....	63
41	Implementation Arrangement of SBSUA Project.....	64
42	Indication of the Knowledge Base of Completed and On-going Development Projects .....	65
43	NARS Agricultural Research Facilities .....	66
44	National Water Resources Council Meetings .....	67
45	Overview of GoB project.....	68
46	Sanctioning or Registration Authorities.....	70
47	Sectoral Institutional Linkage in the Fisheries Sector .....	71
48	Simplified Organogram of NARS .....	72
49	Sponsoring Agencies and their Responsibilities .....	73
50	The Activities of the Union Parishad.....	74
51	The Relationship between ICZM Objectives and Coastal Zone Definitions.....	75
52	Components of Institutional Environment .....	76
53	Non-profit institutions serving household establishments .....	77
54	Distribution of Grameen Bank branches .....	78
55	Distribution of NGOs.....	79
56	Distribution of NGOs by Sectoral Activities .....	80
57	List of COFCON members.....	81
58	NGO Selection Criteria of ECFC.....	82
59	NGOs Services to the Disadvantaged Children .....	83
60	Number of members of four major national NGOs .....	84
61	Ongoing Activities of NGOs in the Southwest Region .....	85
62	Overview of NGO projects .....	86

---

63	Sectoral Distribution of NGOs.....	88
64	Street Children Covered by the NGOs .....	89
65	Summary Distribution of NGOs in the Coastal Zone by Activity and Location .....	90
66	Aquaculture and Hatchery Declared Study, 1991.....	91
67	Bangladesh Water and Power Development Order, 1972 .....	92
68	GoB Ban on Shrimp Fry Catching .....	93
69	LEGAL Institutional Annexes .....	94
70	List of Laws Related to ICZM .....	95
71	Manual for Land Management, 1990,'94,'95 .....	96
72	Marine Fisheries Ordinance 1964.....	97
73	Notification on GoB Order of Banning Shrimp Fry Import.....	98
74	Notification on Land Development tax.....	99
75	Notification on Shrimp Committee Revised .....	100
76	Notification on Shrimp Committee.....	101
77	Notification on Tank Act .....	102
78	Semi-Intensive Shrimp Land Declared Industrial Land .....	103
79	Shrimp Sector Legal and Institutional Review .....	104
80	Shrimp Tax on Benefitted Land.....	105
81	Summary Overview of Shrimp Related Laws and their Relevance .....	106
82	Tanks Improvement Act 1939.....	107
83	The East Bengal Protection and Conservation of Fish .....	108
84	The Fish and Fish Product Ordinances.....	109
85	The Protection and Conservation of Fish Rules,1985 .....	110
86	The Protection and Conservation of Fish,1982.....	111
87	Water Pollution Ordinance,1970 .....	112
88	Environment Treaties Signed by Bangladesh.....	113
89	Agencies Involved in National Policy .....	114
90	Categorization of Policy Statement .....	115
91	Coastal Zone Policy, 2005 .....	116
92	Formulation Time of Policy Documents.....	117
93	GoB ICZM Policy Note 99 .....	118
94	Guidelines of Different Activities .....	119
95	Livestock Development Policy .....	120
96	National Agriculture Policy .....	121

---

97 National Energy Policy .....	122
98 National Environment Policy and Implementation Plan.....	123
99 National Fisheries Policy Revised.....	124
100 National Fisheries Policy .....	125
101 National Integrated Pest Management Policy .....	126
102 National Land Use Policy.....	127
103 National Parjatan Policy.....	128
104 National Water Policy .....	129
105 National Women Policy .....	130
106 New Agriculture Extension Policy, .....	131
107 Organisations Role in Policy Documents .....	132
108 Organisations Role in Coastal Issues.....	133
109 Policy Documents Approval Procedures.....	134
110 Policy Statements Implementation Status .....	135
111 Shrimp Issues for Harmonization Policies.....	136
112 Shrimp Related Policies and Cabinet Decisions .....	137
113 The National Forestry Policy, 1994 .....	138
114 The National Tourism Policy .....	139
<b>Economics and Finance (ECO) .....</b>	<b>141</b>
115 Coastal local NGOs Microfinance.....	143
116 Credit Disbur and Recovery by BRDB.....	145
117 Credit Disbursement by Krishi Bank .....	146
118 Credit Distribution in Upazila by BRDB .....	147
119 Active labour Force .....	149
120 Agricultural Labour Force 1996.....	150
121 Combination of Livelihood Activities .....	152
122 Contribution of Selected Private Sectors in the Economy.....	154
123 Distribution of Major Livelihood Groups .....	155
124 Employment Status.....	156
125 Employment status of Women .....	157
126 Household Income 2001 (By Upazilla) .....	158
127 Main Occupations of Slum Dwellers .....	160
128 Main Occupations of the Floating Population .....	161
129 Occupational Category, 96.....	162

---

130 Popn 5Yrs And Over .....	163
131 Population of 20 Year and Over.....	165
132 Statistics on Fisher Household.....	166
133 Working Force.....	167
134 Cargo Handled at Chittagong and Mongla Ports .....	168
135 Commodity-wise Export and Import.....	169
136 International Vessels Entered into and Clear from Ports .....	170
137 Vessels Handled at Ports.....	171
138 Annual Investments and Export in EPZs .....	172
139 Sectoral Distribution of GDP .....	173
140 Bank Advances and Deposits by Zilla and Locality.....	174
141 Agriculture Labourer Daily Wage Rates.....	175
142 Average Wage Rate of Labourers .....	176
143 Average Wage Rate of Agriculture Labourers .....	177
144 Daily Wage in Agriculture in Char Mora Dona.....	178
145 Fluctuation of Agriculture Wage Rate .....	179
146 Wage Rate of Agri. without Food, 1999.....	180
147 Wage Rate of Selective Districts .....	181
148 Agricultural Census .....	182
149 Area of plantation in Coastal Afforestation Divisions.....	184
150 Areas and Production of Different Crops, 1998-99 .....	185
151 Child Labor in the Coastal Area.....	186
152 Crop Loss by Natural Calamities .....	187
153 Crop Prices at Harvest (Barisal, Chittagong, Khulna) .....	188
154 Cropping Status.....	189
155 Distribution of Agriculture Labor Households, 1996 .....	190
156 Distribution of Rural Households by Farm size.....	191
157 Fish Production .....	192
158 Forest Coverage .....	193
159 Forest Product.....	194
160 Forest Products from Sundarbans Reserved Forests.....	195
161 Irrigation Status in the Coastal Region .....	196
162 Regional Distribution of Female Headed Farm Households.....	197
163 Rice Production.....	198

---

164 Rice production (Per Capita) .....	199
165 Rural Households by Farm Category .....	200
166 Rural Households Distribution .....	201
167 Shrimp Farm of Selective Districts .....	202
168 Current Harvesting Methods for Different Gears .....	203
169 Distribution of Employment for Different Livelihood Groups .....	204
170 Distribution of Shrimp Fry Collectors .....	205
171 Fish Catch from Inland Waters .....	206
172 Fish Catch from Ponds .....	207
173 Fish Catch from Main Resources .....	208
174 Marine Craft and Gear .....	209
175 Marine Fisheries sub-sectors .....	210
176 Region wise Availability of shrimp fry .....	211
177 Shrimp Hatcheries .....	212
178 Shrimp Production .....	213
179 Value of Total and Shrimp Export Earnings for Bangladesh in the Period 1972/73 - 2000/01 .....	214
180 Handloom units, 1990 .....	215
181 Statistics of Brick Kilns .....	216
182 Statistics on Salt Cultivation .....	217
183 Visitor Arrivals in Coastal BPC Hotels and Motels .....	218
184 Distribution of Growth Centers .....	219
<b>Funds and Interventions (FUN) .....</b>	<b>221</b>
185 O&M Expenses Borne by Different Parties in 2000-2002 in CDSP .....	223
186 Arsenic Contamination Rate .....	224
187 Child Mortality Rate .....	225
188 Household Number Consuming Less Calorie .....	226
189 Household Size .....	227
190 Household with Living Facility of Selective upazilla .....	228
191 Infant Mortality Rate by Sex and Locality .....	229
192 Insecurity Index .....	230
193 Living Facility by Locality .....	231
194 Male-Female Ratio .....	233
195 Malnutrition Muac < 12.5 cm .....	234

---

196 Maternal Mortality Rate, 1998 .....	235
197 Maternal Mortality Rate, 2002 .....	236
198 Method of Treatment .....	237
199 Percentage of Potable Water Source.....	238
200 Population Distribution.....	239
201 Population in Greater Districts .....	240
202 Reproductive and Maternal Health Status .....	241
203 TFR and CPR for Two Years .....	242
204 Coast Guard Achivements of Bangladesh.....	243
205 Allocation of VGD.....	244
206 Number of Beneficiaries of the Boyoshko Bhata Program .....	245
207 Number of Beneficiaries of the Dustha Mohila Bhata Program .....	246
208 Population Percentage Comparison for Selective Divisions, 1991 .....	247
209 Summary Activities of Rural Development Program of WFP.....	248
210 VGD information of Costal Region.....	250
211 VGF information of Costal Region.....	252
<b>Human beings and Social Conditions (HUM) .....</b>	<b>253</b>
212 District Area and Population .....	255
213 Female Headed Household of Selective Upazilla.....	256
214 Female Headed Household, 1996.....	258
215 Household and Population by Sex, 2001 .....	259
216 Household Characteristic.....	260
217 Household Information 1981.....	261
218 Household Information 1991.....	262
219 Immigrants Number.....	263
220 Internal Migration by Direction and Duration .....	264
221 Life Expectancy at Birth .....	265
222 Life Expectancy at Birth by Year.....	266
223 Life Table for Bangladesh Population, 2000 .....	267
224 Male-Female Ratio by Age Group, 2001.....	268
225 Migration Direction (Domestic) .....	269
226 Migration of Respondents of PDSCL.....	270
227 Migration Status, 1991.....	271
228 Migration ( Lifetime Internal) of Bangladesh.....	272

---

229 Population by Age Group, 1991 .....	273
230 Population Census 1974 .....	275
231 Population Census 1981 .....	276
232 Population Census 1991 .....	277
233 Population Census 2011 .....	278
234 Population Distribution in Urban, 1991.....	279
235 Population in Rural and Urban Settings.....	280
236 Population of Municipalities and SMA, 2001 .....	281
237 Population of Urban in Selective Districts, 1999 .....	282
238 Population Projections.....	283
239 Population with No Polder Risk area .....	284
240 Projection of Live Stock Population .....	285
241 Religious Communities of Selective Districts.....	286
242 Tribal Population,1991.....	287
243 Upazila Statistics, 2001 .....	289
244 Urban Slums Statistics in Selective Thanas, 1997.....	290
245 Credit Source.....	291
246 Distribution of Monthly Expenditure.....	292
247 Financial Assets in PDSCL.....	293
248 Household by Crisis Coping Measures ,1999.....	294
249 Households (Urban) by Main Source of Income.....	295
250 Income Disposal in PDSCL.....	296
251 Reason of Taking Credit by Household.....	297
252 Reason of Taking Credit by Urban and Rural Household.....	298
253 Vulnerabilities by Occupations in PDSCL .....	299
254 Family Planning Assistant.....	301
255 Marital Status of Women.....	302
256 Educational Status by Sex and Locality, 1991 .....	303
257 Educational Status, 1991 .....	305
258 Literacy Percentage for Urban Population, 1999 .....	306
259 Literacy Rates.....	307
260 Primary Educational Status.....	308
261 Vocational Training Status .....	309
262 Acid Attack Cases, Divisionwise Comparison.....	311

---

263 Arsenic Contamination in Drinking Water .....	312
264 Calorie and Protein Intake .....	313
265 Communicable Disease Information by Zone,1998.....	314
266 Drinking Water Status, 2001 .....	315
267 Health Status of Children .....	316
268 Household by Type of Latrine .....	318
269 Households by Source of Water .....	319
270 Infant Mortality Rate and Fertility Rate, 1997 .....	320
271 Malnutrition Information.....	321
272 Morbidity from Disease .....	322
273 Sanitation Behaviour.....	324
274 Sanitation Status,2001 .....	325
275 Violent Occurrences, Divisionwise Comparison.....	326
276 Hard Core and Basic Poverty.....	327
277 Household by Main Source of Income, 2002.....	328
278 Household Expenditures, 2002.....	329
279 Household Income (Average) .....	330
280 Households by Poverty Measures, 1998 .....	331
281 Poverty Incidence, 1999.....	332
282 Agriculture Land Holding Status, 2001 .....	333
283 Agriculture Land Per Person, 1996 .....	334
284 Composition of Rural Households .....	335
285 Cultivated And Homestead Area .....	336
286 Household by Land Holding Group .....	337
287 Land Owned by Farm Size.....	338
288 Land Ownership Pattern .....	339
289 Electricity Supply Status, 2001.....	340
290 Household as Per Cattle Holding, 1996 .....	341
291 Household by Electricity Connection in Selective Districts.....	342
292 Household by Wall Material in Selective Thanas, 1991.....	343
293 Households by Roof Material by Selective Thanas, 1991 .....	344
294 Households with Electricity Connection, 1991 .....	345
295 Households(Urban) by Roof Material by Selective Thanas, 1991 .....	346
296 Housing Condition, 1991.....	347

---

297 Physical Asset Ownership, 1991 .....	349
298 Tenancy Status .....	350
299 Enrolment, Marriage and Birth Registration, 2000 .....	351
300 Household Social Assets in PDSCL.....	352
<b>Infrastructure and Services (INF) .....</b>	<b>353</b>
301 Agricultural Structure Statistics .....	355
302 Agro Technological Resources .....	356
303 Aquaculture Production Infrastructure .....	357
304 Fisheries Service Centres .....	358
305 Irrigation Projects .....	359
306 Irrigation Units .....	360
307 Operational Irrigation Unit Number .....	361
308 Pumps Installation .....	362
309 Rice Processing Infrastructure .....	363
310 Storage Facility of Selective Districts .....	364
311 Inter Tidal Area .....	365
312 Island Boundary .....	366
313 Railway Route of Selective Districts.....	367
314 Road Density .....	368
315 RHD Road (National).....	369
316 Roads Statistics of Selective Districts.....	371
317 Rural Road.....	372
318 Telephone Connection by Zone .....	373
319 Child Education Status .....	374
320 Educational Data (BANBEIS) by District .....	375
321 Educational Data (BANBEIS) by Upazilla .....	376
322 Primary School Growth.....	377
323 Health Facilities.....	378
324 Hospital Status .....	379
325 Rural Water Supply by District, 2001 .....	380
326 Rural Water Supply by Thana, 2002 .....	381
327 Sanitary Latrine Sales Center of Selective Districts.....	383
328 Sinking Deep Tube Well .....	384
329 Tube Well Number in Selective Districts.....	385

---

330 Coastal Geology .....	386
331 Landuse .....	388
332 Settlement .....	390
333 Power Plants of BPDB .....	392
334 Power Volt Sale of Selective Districts .....	393
335 REB Stations .....	394
336 Wind Turbine Installations.....	395
337 Coastal Embankment.....	396
338 Cyclone Shelter (Purpose Built) Number .....	397
339 Cyclone Shelter Information .....	398
340 Cyclone Shelter Information By Thana .....	401
341 Cyclone Shelter Location.....	402
342 Cyclone Shelter Number .....	403
343 Cyclone Struck time in the Coastal Area.....	404
344 Death by Cyclone in 1991 .....	405
345 Flood Protection Infrastructures of Selective Districts.....	406
346 Information of Killa .....	407
347 Information of Volunteer for Cyclone.....	408
348 Polder (124) Features of Selective Districts.....	409
349 Polder Information.....	410
350 Structure Information of Polder .....	413
351 Location of Lighthouse.....	415
352 Export and Import at Ports .....	417
353 Mooring Places for Ferries in Selective Districts.....	418
<b>Natural Resources and Environment (NRE) .....</b>	<b>419</b>
354 Islands and Chars Information .....	421
355 Information of Coastal Fauna .....	422
356 Information of coastal Flora .....	425
357 Landuse of ECA area .....	427
358 Erosion Accretion .....	429
359 Annual Total Fish Catch.....	430
360 Export of Frozen Shrimp .....	431
361 Fish Catch by Species for All Rivers.....	432
362 Fish Catch by Species for Other Rivers.....	433

---

363 Fish Catch by Species for Principal Rivers .....	434
364 Fish Catch by Species .....	435
365 Fish Catch Data .....	436
366 Fish Catch from Baor.....	437
367 Fish Catch from Beels.....	438
368 Fish Catch from Flood Land.....	439
369 Fish Catch from Kaptai Lake.....	440
370 Fish Catch from River .....	441
371 Fish Catch from Main Sources .....	442
372 Fish Catch from Marine Source.....	443
373 Fish Catch from Pond.....	444
374 Fish Catch from Shrimp Farm.....	445
375 Fish Catch from Water Area.....	446
376 Marine Fishing Zone.....	447
377 Production from Hatcheries in Private Sectors.....	449
378 Shrimp Area Statistics .....	450
379 Species Composition of Pond Catch .....	451
380 Species Composition of Shrimp Catch by Region .....	451
381 Species Group Composition of Flood Land .....	453
382 Species Group Composition of Inland.....	454
383 Species Group Composition of Marine .....	455
384 Species Group Composition of Marine by Fishing Gear .....	456
385 Year-wise Fish Production.....	457
386 Forest Land Information .....	458
387 Groundwater Salinity (Monthly).....	459
388 Shallow Aquifer of Some Thanas .....	461
389 Tree Number .....	463
390 Threatened Living Things .....	464
391 Agricultural Land Types, 1996.....	465
392 Salinity Data of Selected Areas .....	466
393 Soil Conditions .....	467
394 Soil Properties (Chemical) in Selective Islands .....	468
395 Soil Properties (Physical) in Selective Islands .....	469
396 Soil Salinity by Upazilla.....	470

---

397 Top Soil Salinity of Coastal Area (monthly).....	471
398 Coastal Urban Landuse .....	472
399 Pond and Shrimp Ghers (Area), 2001-02 .....	474
400 Agricultural Product .....	475
401 Development Projects .....	476
402 Ecological Critical Area.....	477
403 Education Structure Information .....	478
404 Educational Institution Information .....	479
405 Educational Institutions .....	481
406 Environmental Protected Area .....	482
407 Godown Facility .....	483
408 Health related Information .....	484
409 Irrigation Facilities.....	485
410 Land Used Information .....	486
411 Social Information.....	487
412 Tourist Spot in the Coastal Area .....	488
413 Utilities Information.....	489
414 Air Pollution by Different Vehicles.....	490
415 Relative Humidity (Average ) .....	491
416 Cyclonic Storm Chronology.....	493
417 Rainfall (Average),1999.....	494
418 Sunshine Hours (averages from 1997-2001) .....	496
419 Cyclone Land Fall Information (Recent Past).....	497
420 Cyclone Landfall Distribution (Monthly),1891-1991.....	498
421 Cyclone Landfall of Selective Area, 2001 .....	499
422 Cyclone Path in Bangladesh .....	500
423 Cyclones Occurrence over 200 Years .....	501
424 Cyclonic Floods (Historical) .....	502
425 Wind Speed (Average) .....	503
426 Wind Speed of Selective Area, 2000.....	504
427 Natural Gas Field Information, June 2003 .....	505
428 Natural Gas Production.....	506
429 Salt Bed Information .....	507
430 Salt Industry .....	510

---

431 Mineral Resource Reserve .....	513
432 Mineral Resources, 1997 .....	514
433 Wave Height Prediction .....	515
434 Coast Line.....	516
435 Tide Level Variation (Mean) over Year .....	518
436 Coastal Flooding (2005) .....	519
437 Coastal Flooding (2050) .....	521

# Administration and Institutions (ADM)

Name of Data layer: **Administrative Units of the Coastal Zone**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains area of 19 CZ districts and no. of administrative units upto village under these districts.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 19 coastal districts.
History of the dataset	Population Census of 1991 and 2001, National Report, Bangladesh Bureau of Statistics, Planning Division, Ministry of Planning.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

### Sample of Data

### Metadata

Data Type	Shapefile
Abstract	A spatial data layer of District boundaries of coastal area along with the attribute information derived from Geomaster Database, 2001 published by Bangladesh Bureau of Statistics (BBS).
Quality	Scale of the source data was 1:63360. Therefore, it is recommended that in any kind of analysis the data layer should not be used exceeding above mentioned scale.
Completeness	This data layer covers all district coastal area according to Geomaster database 2001.
History of the dataset	This datalayer is extracted from datalayer of NWRD. Original source of this dataset is Police Station Maps published by Directorate of Land Record and Survey (DLRS), which were compiled between 1905-1945. Some maps are still being updated as new upazillas are created. Scale of these maps were 1"=1mile excluding Chittagong Hill Tracts. Reserve Forest maps published by Survey of Bangladesh were used for Sundarbans region. Attribute information were attached according to the Geomaster database 2001 collected from Bangladesh Bureau of Statistics (BBS).
Purpose of production	This data layer is essential for any data analysis and thematic map preparation. It can linked with BBS statistical information or any other statistical database through geocode. It is also national, regional and local level planning, analysis and management purposes.
Process description	The coastal distict boundaries have been captured by Police Station Maps published by Directorate of Land Record and Survey (DLRS) with input RMS error 0.002 - 0.005 inch and output 3 - 20 meter. For Sundarban area, union boundaries have been delineated with the help of river course and small atlas of BBS over Reserve Forest maps published by Survey of Bangladesh. Geocoding in the maps has been done according to the Geomaster database 2001 collected from BBS. Other attribute information have been attached according to the Geomaster database 2001. The source map was in Cassinii projection system projection system. It's transformed into Bangladesh Transverse Mercator (BTM) projection system. International boundary is used from SOB Topo map of 1: 50,000 scale and coast line generated from IRS Liss 2005 image.

**Sample of Data**

*Attribute Table*

**Bundle Information (Data Field Description and Unit)**

Name of Data layer: **DEM of Coastal Zone**

### Metadata

Data Type	Tif File
Abstract	A digital representation of the elevation of locations on the land surface is termed as Digital Elevation Model (DEM). A DEM of coastal zone representing the elevations at points in a rectangular grid of the land surface.
Quality	Quality of this data layer depends on the data collection and analysis process of the source organization.
Completeness	The data layer covers part of the coastal zone.
History of the dataset	The source of this dataset is Map of Coastal area in 1:10000 scale published by Bangladesh Inland Water Transport Authority (BIWTA),1999. Map compiled from aerial photograph taken 1990 by FINNMAP Oy and updated aerial photographs 1998 by FM International Oy. Field identification and compilation in 1998.
Purpose of production	Digital elevation model can be used in digital terrain analysis for various environmental, engineering, urban and rural planning purposes. Further it can be used for soil erosion modelling, crop suitability modelling, environmental modelling, natural resource management.
Process description	All Spot value has been captured from hardcopy maps and converted it into BTM projection. All elevation data converted into PWD datum from Bangladesh datum. The TIN model has been used for creating DEM. A TIN comprises a triangular network of vertices, known as mass points, with associated coordinates in three dimensions connected by edges to form a triangular tessellation. Spatial resolution of DEM is 50X50m.

### Metadata

Data Type	Simple Table
Abstract	This data layer contains name of the CZ thanas which are categorized as exposed and interior on the basis of location.
Quality	
Completeness	This data layer covers the coastal zone thanas.
History of the dataset	Delineation of the Coastal Zone of Bangladesh under PDO-ICZMP Project published in December, 2003.
Purpose of production	
Process description	The name of the upazilas have been collected from BBS. For classification of the upazilas a systematic approach to delineate the coastal zone was initiated in March 2002. The three basic natural system processes and events that govern opportunities and vulnerabilities of the coastal zone of Bangladesh are: tidal fluctuations; salinities (soil, surface water or groundwater); and cyclone and storm surge risk. Considering these three criteria, an assessment has been done on the delineation of the coastal zone. For each of these criteria, threshold values have been specified and corresponding impacted areas were determined (PDO-ICZMP WP005).

Data Type	Shapefile
Abstract	A spatial data layer of soil resource map presenting the soil drainage, landform, landtype, soil surface recession, texture and drainage information of coastal area.
Quality	Quality of this data layer depends on the data analysis process of the source organization.
Completeness	The data layer covers coastal area of Bangladesh.
History of the dataset	SRDI collected soil parameter data through field survey.
Purpose of production	This is required for getting knowledge on soil parameters. Soil parameters show the different characteristic of soil of coastal area, which will help the planners for agricultural development and environmental management.
Process description	This datalayer is extracted from datalayer of NWRD. NWRD has collected Upazilla Nirdeshika map by SRDI into digital format and organized it in an ordered form to prepare it as a NWRD data layer. International boundary has been used in 1:50,000 scale created by Survey of Bangladesh (SoB). Data layer also converted from LCC to BTM projection.

Task	GPP	CDSP	GPWM
Operation	During pre monsoon, monsoon and late monsoon, the WMO will observe whether the regulator/sluice gate is opened or closed as per water requirement of various crops on different lands at various elevations.	Operation sluice (maintaining right water level) Taking responsibility during emergency situation	Command area between 1000-5000ha operation and management will be made over to the LGI and WMOs
Maintenance	Repair sluice gate, regulator, and fallboard. Apply grease to regulator/sluice, replace nut, bolt, paint gate, remove silt, replace blocks every year before the monsoon season as per requirement Re-excavate the bed of drainage /conservation <i>kholis</i> as per necessity and remove the water hyacinth and other vegetation	Maintenance of the infrastructure in collaboration with the Agencies concerned and UP. In general only minor maintenance falls under the responsibility of the WMC.	UP will acquire ownership of the infrastructure up to 1,000 ha and it will enter into agreement with the WMO for management and operation. Major maintenance will be done by LG, routine and periodic by the WMOs
Financial	Prepare a yearly budget and raise funds through subscription at a rate/acre from the benefited farmers and other beneficiaries at rates fixed by the WMO and will maintain the fund according to the by laws/procedures	Generate and proper management of financial resources for O&M	Contribution from the beneficiary for the cost of O&M.
Other		Maintain relations with agencies and LG	Maintain relation with LGI-Community-BWDB

Name of Data layer: **Credit Distribution in Upazila by BRDB**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains timeseries data on credit disbursement and recovery in upazilla by BRDB of 19 coastal districts in the year 1997-98, 1998-99, 1999-2000.
Quality	This data layer has been taken from PDO-ICZMP.
Completeness	This data layer covers 19 coastal districts.
History of the dataset	This data layer was collected from the Working Paper (no.012) titled "Program for the poor: a report on social safety nets and micro-credit activities" under Program Development Office for Integrated Coastal Zone Management Plan Project; Water Resources Planning Organization; Ministry of Water Resources, Bangladesh. Dhaka, April 2003.
Purpose of production	As this datalayer gives an overview on the status of credit disbursement and recovery of the coastal districts, it can be used in rural planning and also in different types of socio-economic analysis at both national and regional level.
Process description	ICRD collected this data layer from ICZMP in digital form and stored it without any further modification.

Abstract	This data layer encloses no. of VOs and VDCs and savings of only 7 upazilas under the Empowerment of Coastal Fishing Communities for Livelihood Security (ECFC) of June 2003.
Quality	This data layer has been collected from PDO-ICZMP.
Completeness	This data layer covers total coastal region.
History of the dataset	ECFC (office records) Local Level Institutional Arrangement in ECFC Project under PDO-ICZMP Project published in September 2003.
Purpose of production	To get the informations of the community level and to provide their interventions to empower the most disadvantaged and highly vulnerable group of rural people.
Process description	As a part of drafting the 'Local Level Institutional Arrangements in ECFC Project - a case study (PDO-ICZMP WP023)' this layer was prepared through collecting relevant information from project documents and discussion with the relevant staffs and beneficiaries during 2003.

**Sample of Data****Status of VOs and VDCs as of June 2003 in the ECFC Project**

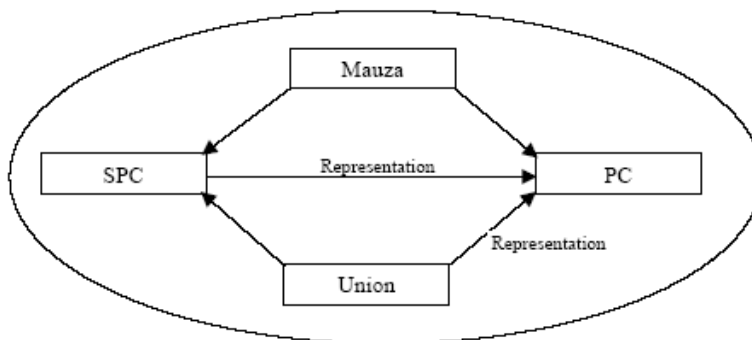

Upazila	No of Villages	No. of VOs			No. of VDCs	Savings of VOs (Tk)
		Male	Female	Total		
Cox's Bazar	14	14	14	28	10	196,750
Ramu	1	2	2	4	1	19,150
Ukhiya	3	3	3	6	3	22,430

<b>Meeting &amp; Date</b>	<b>Agenda and/or Decisions</b>
1st meeting March 28, 1983	Information not readily available
2nd Meeting January 09, 1985	<b>Decisions</b> <ul style="list-style-type: none"> <li>a) Feasibility of a barrage to develop water resources of Brahmaputra river.</li> <li>b) Timely completion of Teesta barrage</li> <li>c) Effective completion of Muhuri project</li> <li>d) Emergency repair of embankment along the Monu river</li> <li>e) Effective plan to utilise water of border rivers</li> <li>f) Review past studies made for water resource development of the Ganges.</li> </ul>
3rd Meeting March 18, 1997	<b>Decisions</b> <ul style="list-style-type: none"> <li>a) An Executive Committee with the Minister for Water Resources as Lead.</li> <li>b) Inclusion of LGRD Minister, Planning State Minister &amp; Secretary LGD as members of the 'National Water Resources Parishad'.</li> <li>c) To hold the meeting every 4 months.</li> <li>d) To prepare 'National Water Policy on a priority basis'.</li> <li>e) Dredging/loop cutting to restore navigability of rivers.</li> <li>f) To conserve water from hills of Chittagong &amp; Sylhet and use in agriculture.</li> <li>g) All water using agencies to send proposals immediately to MoWR.</li> </ul>

**Metadata**

Data Type	Simple Table
Abstract	Name of the GoB projects in execution or approved for implimentation in CZ with related detailed informations are shown in this data layer.
Quality	The quality depends on the source.
Completeness	This data layer covers overview of GoB project.
History of the dataset	Source of this data layer is a report 'Inventory of Projects and Initiatives in the Coastal Zone (update 2003)' under PDO¿ICZMP Project published in 2003.
Purpose of production	To prepare an inventory of projects for Priority Investment Program (PIP).The aim of the inventory is to support the formulation of Investment Concept Papers (ICPs) and corresponding harmonization and coordination procedures for their implementation.
Process description	This layer is an outcome of multiple methodological activities. As part of the preperation of the invnetory of projects working in the coastal zone (PDO-ICZMP WP025) through agency correspondence, a request letter has been sent from PDO to the respective GOs and NGOs on September the 3rd 2003 to update the previous document. A total of sixty organizations for both the government and non-government sector were selected for the correspondence. A list of departments/organizations according to the previous version of the inventory was attached for the agencies utmost convenience to endow with closer feedback. Satisfactory responses received from both the GOs and NGOs. Moreover, further interaction and attempt was also made to these organizations as and when required. Therefore, the synopsis of the major methodological activities adopted can be described as the followings - review of existing inventories (e.g. WP006: November 2002 etc.); review of relevant project documents (both GoB and NGO sector); agency correspondence (both: outreach and mail based); consultation, interaction and communication with relevant professionals (often through focal points or using existing ICZM networks etc.); searching relevant agency websites (e.g. CARE, ADB websites etc.); updating of formats for documentation (e.g. fact sheets etc.). The Annual development program 2003-2004 of GoB has been used as a basic literature to update the GoB agencies initiatives/projects.

Metadata

Data Type	Simple Table
Abstract	Name of the NGO projects in execution or approved for implimentation in CZ with related detailed informations are shown in this data layer.
Quality	
Completeness	This data layer covers overview of NGO projects.
History of the dataset	Inventory of Projects and Initiatives in the Coastal Zone (update 2003) under PDO&ICZMP Project published in December 2003.
Purpose of production	
Process description	This layer is an outcome of multiple methodological activities. As part of the preperation of the invntory of projects working in the coastal zone (PDO-ICZMP WP025) through agency correspondence, a request letter has been sent from PDO to the respective GOs and NGOs on September the 3rd 2003 to update the previous document. A total of sixty organizations for both the government and non-government sector were selected for the correspondence. A list of departments/organizations according to the previous version of the inventory was attached for the agencies utmost convenience to endow with closer feedback. Satisfactory responses received from both the GOs and NGOs. Moreover, further interaction and attempt was also made to these organizations as and when required. Therefore, the synopsis of the major methodological activities adopted can be described as the followings - review of existing inventories (e.g. WP006: November 2002 etc.); review of relevant project documents (both GoB and NGO sector); agency correspondence (both: outreach and mail based); consultation, interaction and communication with relevant professionals (often through focal points or using existing ICZM networks etc.); searching relevant agency websites (e.g. CARE, ADB websites etc.); updating of formats for documentation (e.g. fact sheets etc.). The Annual development program 2003-2004 of GoB has been used as a basic literature to update the GoB agencies initiatives/projects.

**Sample of Data****THE NATIONAL ENVIRONMENT POLICY & IMPLEMENTATION PLAN, 1992**

In the background description of the policy document, among other situations special remarks have been made about the existence of environmental problems arising out of the natural calamities like cyclone, tidal bore, spreading the dangers of salinity, land degradation, quick reduction of forestry, lack of stability of weather and natural atmosphere, etc having broader reference to the coastal areas of the country. It has been specially stated that the activities related to environment are spread over all the regions of the country and in almost all the sectors of development. The activities for improvement of the environmental issues have been categorized in 15 different departmental heads. of these, the following policy statements are related to coastal zones.

Para No.	Policy statements	Implementing agency	Status of implementation	Status correspond columns specified in Tables	
				1	2
<b>3.6</b>	<b>Land</b>				
3.6.2	Strengthening the activities relating to reduction and land degradation, preservation and improvement of fertility, land reclamation, preservation and management of the newly formed land.	MoL, MoEF, MoA, MoWR	The implementation process is being carried out jointly with the concerned Ministries. Ministry of Environment and Forest gives the advisory services to other line ministries.	4,5,6	5
3.6.3	Encourage introduction of use of	MOA	Besides the coordinative activities	4,6	5

ROLE OF DIFFERENT ORGANISATIONS IN POLICY DOCUMENTS

Organisation/agency	Referred policies	Given roles (only related to coastal zone issues)
<b>Government &amp; national agencies</b>		
Ministry of Planning	NDP/NSP (2001)	Strategy formulation, planning and resource allocation, clear focus.
Ministry of Foreign Affairs	NEPs (1995)	Preparation of a long-term energy plan.
	NDPs (1992)	Attracting international investments in the tourism industry, promoting tourism through overseas diplomatic missions.
Ministry of Defense	EPoP (1992)	Assisting in regional co-operation for the cause of reduction of desertification & salinity.
	EPoP (1992)	Promotion of municipal waste clean pollution, issuing a Contingency Plan for accidental spillage & pollution, survey, investigations & monitoring for land reclamation, erosion protection, soil fertility and coastal zone; reduction of desertification & salinity through regional co-operation.
Ministry of Water Resources	EPoP (1992)	Construction and management efforts (including survey, investigations & monitoring) for land reclamation, erosion protection, soil fertility and coastal zone; maintaining reservoirs & storage capacity of dams and water bodies; reduction of desertification & salinity through regional co-operation, management & conservation of groundwater.
Ministry of Agriculture	EPoP (1992)	Subsistence of soil fertility & related technology; control of harmful chemical insecticide & pesticide; contribution to National Land use Plan; conservation and management efforts (including survey).

Abstract	This data layer describes shrimp related issues for harmonization of different sector policies.
Quality	This data layer has been taken from PDO-ICZMP.
Completeness	This data layer covers shrimp related issues for harmonization of different sector policies.
History of the dataset	This data layer was collected from the Working Paper (no.009) titled "A System Analysis of Shrimp Production" under Program Development Office for Integrated Coastal Zone Management Plan Project; Water Resources Planning Organization; Ministry of Water Resources, Bangladesh, Dhaka June 2003.
Purpose of production	
Process description	ICRD collected this data layer from ICZMP in digital form and stored it without any further modification.

**Sample of Data****Shrimp related issues for harmonization of different sector policies**

<b>Relevant policies</b>	<b>Issue for harmonization</b>
National Environment Policy, 1995 and Shrimp Mohal Management Policy, 1992	According to the National Environment Policy, 1995, the salinity in land can not be increased. The Shrimp Mohal Management Policy declares suitable land for shrimp cultivation as shrimp mohal, thereby challenging the policy to not increase salinity in land.
Export Policy, 1997-2002 and National Environment Policy, 1995	An expansion of traditional/semi-intensive cultivation of shrimp, as targeted in the Export Policy, could lead to an increase in salinity, which is not allowed under the provisions laid down in the Environment Policy.
National Land Use Policy, 2001 and National Fish Policy, 1998	Harmonization needed in zoning in the coastal areas on the basis of land topography, tidal inundation, water salinity, soil quality and other environmental factors, with the active participation of local people as promoted by the National Land Use Policy.
Agriculture Policy, 1999 and National Water Policy, 1998	Non-inclusion in the Agriculture Policy, 1999, of the provision to address the environmental issues against impact of the use of agro-chemicals on soil, water bodies, fisheries and overall biodiversity. Emphasis on single sector (agriculture) use of water in Agricultural Policy, while, the National Water Policy strongly recommends the integration of uses of water taking into consideration the interest of all users.

Name of Data layer: **Active labour Force**

### Metadata

Data Type	PDF File
Abstract	No. of active labour force aged 15 years and older are given localitywise for 19 coastal zone districts.
Quality	This data layer was collected from ICZMP.
Completeness	This data layer covers the coastal zone, rest of Bangladesh and entire Bangladesh.
History of the dataset	Report of Labor Force Survey of Bangladesh 1999-2000. Bangladesh Bureau of Statistics. Dhaka, August 2002.
Purpose of production	
Process description	ICRD collected this data layer from ICZMP in digital form and stored it without any further modification.

Name of Data layer: **Agricultural Labour Force 1996**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on agricultural labour force of 19 coastal districts.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 19 coastal districts.
History of the dataset	This data layer was collected from Census of Agriculture, 1996, Bangladesh Bureau of Statistics, Dhaka, July 1999.
Purpose of production	As this datalayer contains statistics on agricultural labor force of the coastal zone, it can be used in agriculture related management and planning.
Process description	It has been collected from the source and converted it to digital format and stored.

Data Type	PDF File
Abstract	In this data layer different types of combination of livelihood activities for individuals are presented.
Quality	
Completeness	This data layer covers total coastal region.
History of the dataset	PDSCL survey 2002. 'Coastal Livelihoods: Conditions and Context' under PDO¿ICZMP Project published in June 2003.
Purpose of production	
Process description	<p>This layer has been generated through the survey on 'Perceptions of Direct Stakeholders on Coastal Livelihoods'. Household interviews started on 6 May and continued up to 9 August 2002. A team of two researchers, one female and one male, administered the interviews of household males and females using a checklist. Staff of partner/facilitating organizations supported them. The survey methodology was developed in consultation with representatives of the partners and an outline paper was shared and discussed with them in Dhaka on 2 May 2002. It was decided at the outset that about 100 households would be covered in the survey. The idea is to gain an insight about the coastal zone through the eyes of 100 households in their struggle for livelihood. The following methodology and approach were adopted - The coastal zone was divided into nine zones based on geographic and physical characteristics; The number of households (HH) to be interviewed per zone has been decided primarily on the basis of the number of different types of vulnerabilities identified for each zone through secondary sources; The second factor influencing the number of HHs to be interviewed per zone was the population of each sub-zone; The actual number of households to be interviewed per zone was determined by a weighted index in which the numbers of vulnerability issues in each zone and the number of people in that zone each carry equal weight. To arrive at the percentage of HHs to be interviewed from that zone, the number of issues is multiplied by the percentage of the population; Within zones the households were selected on the basis of eight main occupational categories, as perceived by the households themselves. The percentage distribution of the households across these eight categories in a zone is based on secondary sources and the team¿s experience and knowledge of the different zones ; By combining the number of HHs to be interviewed per zone and the spread of occupational categories in each zone the spread of the HHs to be interviewed across each occupational category in a zone has been planned. Furthermore, for each zone one or two female-headed household was interviewed, with a total of 10 interviews.</p>

## Sample of Data

### Combination of livelihood activities

Male	Female
◊ Agriculture, day labor;	◊ Agriculture (homestead gardening), poultry raising, labor management;
◊ Agriculture, trading;	◊ Agriculture, livestock rearing, pond aquaculture, poultry keeping;
◊ Agriculture, sawing (timber)	◊ Agriculture (harvesting), paddy husking, net making;
◊ Agriculture, salt production, trading;	◊ Agriculture, poultry keeping, livestock rearing, making of cow-dung fuel;
◊ Agriculture, rickshaw van driving;	◊ Agriculture (harvesting), <i>muri</i> trading, paddy husking, livestock rearing, poultry keeping, egg selling;
◊ Agriculture, fishing, rickshaw van driving;	◊ Day labor, salt farming;
◊ Agriculture, work in brickfield;	◊ Day labor, net making, earthwork, crab collection, <i>kantha</i>
◊ Agriculture (harvesting), paddy	

Name of Data layer: **Contribution of Selected Private Sectors in the Economy**

### Metadata

Data Type	PDF File
Abstract	Employment status of selected private sector and their contribution to GDP are presented in this layer.
Quality	This data layer has been collected from PDO-ICZMP.
Completeness	This data layer covers total coastal region.
History of the dataset	Role of the private sector ĳ An assessment of the status in the coastal zone of Bangladesh under PDOĳICZMP Project published in February 2004.
Purpose of production	
Process description	As a part of drafting the 'Role of the Private Sector - An assessment of the status in the coastal zone of Bangladesh (PDO-ICZMP WP028)' this layer was prepared through discussion with the concerned agencies during 2003-2004.

### Sample of Data

#### **Contribution of selected private sectors in the economy**

<b>Sector</b>	<b>Employment</b>	<b>Contribution to GDP</b>
Ship Breaking	Around 100,000 people are directly involved in this industry for their livelihood	About US \$ 52 million to the national economy annually
Coastal Fisheries	There are about 600,000 people employed in the shrimp sector in Bangladesh	The sector is generating about US\$ 301 million annually
Dehydrated Fish	Around 12,000 people are involved directly	Figure not available
Salt Processing	38,328 salt farmers are directly involved in Cox's Bazar district	Meet almost the entire demand for raw salt in the country, about 0.9 million M.T.
Tourism	It is estimated that about 500,000 people engaged in tourism sector in Bangladesh	Last year the country earned 60 million US Dollar from this sector

Name of Data layer: **Distribution of Major Livelihood Groups**

### Metadata

Data Type	PDF File
Abstract	This layer shows number of households of four major livelihood groups for 2001 which are estimated by extrapolating the figures from 1996 agriculture population census.
Quality	This data layer has been collected from PDO-ICZMP.
Completeness	This data layer covers total coastal region.
History of the dataset	Bangladesh Compendium of Environment Statistics, 1997 and Population Census 2001: Preliminary Report of BBS. Coastal Livelihoods: Conditions and Context' under PDO-ICZMP Project published in June 2003.
Purpose of production	
Process description	This layer has been generated through extrapolating figures from 1996 agriculture census and combining it with that of 2001 population census. Proportional distribution of rural households among landowning categories in 2001 has been assumed to be that of 1996 Census. Urban areas include SMAs and municipalities (as defined in the Census 1996). Fifty percent of urban households are considered as poor. This layer has been produced as a part of drafting 'Coastal Livelihood - situation and context PDO-ICZMP WP015'.

### Sample of Data

**Distribution of major livelihood groups**

Livelihood groups in the coastal zone	Households (year 2001)	
	Number in million (estimated) <sup>1</sup>	Percentage
Agriculture laborer	1.81	26.4
Small farmer	1.79	26.1
Fisher	0.53	7.8
Urban poor	0.70	10.2
Total (4 groups)	4.84	70.5
Total coastal zone	6.86	100.0

Source: BBS, 1999; 2001

Name of Data layer: **Statistics on Fisher Household**

### Metadata

Data Type	PDF File
Abstract	This layer shows no. of fisher household of different types and percentage with respect to farm household.
Quality	This data layer was collected from ICZMP.
Completeness	This data layer covers the coastal zone and the entire Bangladesh.
History of the dataset	Census of Agriculture 1996. Bangladesh Bureau of Statistics. Dhaka, July 1999.
Purpose of production	
Process description	ICRD collected this data layer from ICZMP in digital form and stored it without any further modification.

### Sample of Data

#### STATISTICS ON FISHER HOUSEHOLDS

District	Total farm households (000)	Fish catching households (000)				% of fish catching households
		Small	Medium	Large	Total

Name of Data layer: **Working Force**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on working force in the coastal zone in 1991 and 2001.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers the coastal zone.
History of the dataset	This data layer was collected from Population Census 2001 National Report (Provisional). Bangladesh Bureau of Statistics, Planning Division, Ministry of Planning, July 2003 and Bangladesh Population Census, 1991: Zila Series. Bangladesh Bureau of Statistics, Dhaka, May 1994.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Cargo Handed at Chittagong and Mongla Ports**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains cargo handling information of both Chittagong and Mongla port according to Statistical Yearbook of Bangladesh 2008, BBS
Quality	Quality of this data layer depends on the data collection and analysis process of the source organization.
Completeness	This data covers the Chittagong and Mongla ports of Bangladesh from the financial year 1995-1996 to 2007-2008.
History of the dataset	The source of this data layer is Statistical Yearbook of Bangladesh 2005 and Statistical Yearbook of Bangladesh 2008 of Bangladesh Bureau of Statistics and the original sources of the data is port authority of Chittagong and Mongla port.
Purpose of production	Cargo Handling information is essential for any analysis, decision supports on existing facilities and planning for future development in the port sector of Bangladesh. It is also very important for port management and planning.
Process description	ICRD has converted the published data into digital format.

### Sample of Data

Year	Name	Export	Import

Name of Data layer: **Annual Investments and Export in EPZs**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains annual investments and export (US\$) in EPZs of Chittagong and Mongla.
Quality	This data layer was collected from ICZMP.
Completeness	This data layer covers EPZs of Chittagong and Mongla for the year upto 2009-10.
History of the dataset	Source of the data layer is a book titled 'Bangladesh economic review' published by Ministry of Finance, Government of Bangladesh, Dhaka.
Purpose of production	This data layer has been generated to provide the data to various development agencies, research organizations and professionals for financial and economic feasibility studies
Process description	This data layer is collected by ICZMP from Ministry of Finance and ICRD stored it in an organized way.

### Sample of Data

Name of EPZs	Financial Year	Type	Amount
Dhaka	1996-97	Annual Export	119.45
Chittagong	1996-97	Annual Investment	22.89

Name of Data layer: **Agriculture Labourer Daily Wage Rates**

### Metadata

Data Type	PDF File
Abstract	A tabular data of the Daily Wage Rate of Agriculture Labourers of Bangladesh has been developed from the Bangladesh Bureau of Statistics.
Quality	Daily Wage Rate of Agriculture Labourers has been developed by using standard database application.
Completeness	This data covers the all former districts of Coastal Bangladesh.
History of the dataset	The source of this data is the Yearbook of Agricultural Statistics of Bangladesh-2009 of Bangladesh Bureau of Statistics.
Purpose of production	Daily Wage Rate of Agriculture Labourers is essential for any agriculture response and analysis, decision supports on existing status and planning for future development in Bangladesh. It also very important for crop market management and planning.
Process description	This data has been developed by using MS office Access application.

### Sample of Data

Name of Data layer: **Average Wage Rate of Labourers**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains average wage rate(taka) of construction labourers of 2 CZ districts.
Quality	The quality of the data layer depends on the quality of the source.
Completeness	This data layer covers all information about annual average daily wage of construction labour by type of labour.
History of the dataset	The data has been collected from Statistical Year Book of Bangladesh for the year 1991-92 to 2009-10.
Purpose of production	
Process description	ICRD has stored the data as it was collected from BBS and converted it to digital format.

Name of Data layer: **Fluctuation of Agriculture Wage Rate**

### Metadata

Data Type	PDF File
Abstract	In this layer genderwise fluctuation of monthly agricultural wage rate over the year is shown with a graphical representation.
Quality	Quality of this data layer depends on the data collection and compiling procedure adoption. ICRD has stored it only checking with the source.
Completeness	This graphical representation covers the coastal zone.
History of the dataset	Coastal Livelihoods: Conditions and Context' under PDO-ICZMP Project published in June 2003.
Purpose of production	
Process description	As a part of drafting the 'COASTAL LIVELIHOODS - situation and context (PDO-ICZMP WP015)' this layer was prepared through collecting relevant information from Char Development and Settlement Project document titled CDSP-II, 2000. Baseline Survey of Coastal Chars in CDSP Areas 1999-2000. Volume VIII. RDC, 2001. Dhaka during 2003.

### Sample of Data

**Fluctuation of agriculture wage rate**

Name of Data layer: **Wage Rate of Agri. without Food, 1999**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on wage rate of agriculture without food of 12 coastal districts.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 12 coastal districts.
History of the dataset	This data layer was collected from Monthly Statistical Bulletin Bangladesh, Dec 2001 and Feb 2002, Bangladesh Bureau of Statistics, Dhaka.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Wage Rate of Selective Districts**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on average wage rate of agriculture laborers at current price (Taka) from FY 1991-92 to FY 1997-98.
Quality	The quality of the data set solely depends on the source.
Completeness	his dat layer covers 5 coastal districts.
History of the dataset	This data layer was collected from Statistical Year Book of Bangladesh, June 2002, Bangladesh Bureau of Statistics. Dhaka.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

### Metadata

Data Type	Simple Table
Abstract	This data layer contains district wise agricultural statistics including gross cropped area, cropping intensity and irrigated area of 19 coastal districts.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 19 coastal districts.
History of the dataset	This data has been collected for year 1996 and 2008 from Census of Agriculture of Bangladesh Bureau of Statistics.
Purpose of production	As this datalayer contains agricultural statistics of the coastal zone, it can be used agriculture related management and planning.
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Area of plantation in Coastal Afforestation Divisions**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains area (In ha) of plantation in certain forest range of four coastal afforestation divisions upto 2000.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers four coastal afforestation district like Patuakhali, Chittagong, Bhola and Noakhali.
History of the dataset	This data layer was collected from four different sources. These are Integrated Forest Management Plan Coastal Afforestation Division (1999-2008) for Noakhali, Bhola, Patuakhali and Chittagong seperately in Forest Resources Management Project, Forest Department, Dhaka.
Purpose of production	To present the information about the plantation area for the environmental analysis, management, and planning purposes.
Process description	It has been collected from the source and converted it to digital format and stored.

**Metadata**

Data Type	Simple Table
Abstract	This data layer contains statistics on agricultural crop loss due to natural calamities from 1972 to 2009-10 in Bangladesh.
Quality	This data layer fully complies with the source.
Completeness	This data layer covers agricultural crop loss due to natural calamities from 1972 to 2007 in coastal Bangladesh.
History of the dataset	This data layer was collected from NWRD and Statistical year book 2009 .
Purpose of production	This data layer reveals statistics on agricultural production loss due to natural disasters in different years. It can be used in agriculture related management and planning.
Process description	ICRD collected this data layer from NWRD and also, updated it from Statistical year book 2009,stored it without any further modification.

Name of Data layer: **Cropping Status**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains districtwise gross cropped area, cropping intensity and paddy production of the coastal zone in 1996.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers the coastal zone.
History of the dataset	This data was collected for the year 1996 and 2008 from Census of Agriculture, Bangladesh Bureau of Statistics.
Purpose of production	The data layer shows the cropping status of the coastal districts therefore it can be used in agriculture related management and planning and also in different type of socio-economic analysis at both national and regional level.
Process description	It has been collected from the source and converted it to digital format and stored.

### Sample of Data

Name of Data layer: **Distribution of Agriculture Labor Households, 1996**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains total rural householdings and agri-labour based householdings of 19 CZ districts and rest of Bangladesh in 1996.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 19 coastal zone district and of rest of bangladesh.
History of the dataset	Census of Agriculture. Bangladesh Bureau of Statistics. Dhaka, July 1999.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Forest Product**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on yearly production of different type of forest product from 1978-79 to 2002-03.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers different type of forest product.
History of the dataset	This data layer was collected from Year Book of Agricultural Statistics of Bangladesh, Bangladesh Bureau of Statistics, Dhaka.
Purpose of production	The data layer has been generated with a view to give the researcher ready-to-use information of different type of forest production by year.
Process description	It has been collected from the source and converted it to digital format and stored.

### Sample of Data

Production	Year	Production
Timber	1978-79	15422
Firewood	1978-79	19523
Golpata	1978-79	2243
Bamboo	1978-79	60135
Sungrass	1978-79	1534
Honey	1978-79	4724

Name of Data layer: **Forest Products from Sundarbans Reserved Forests**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains different types of forest products of Sundarbans Reserved Forests with their yielding(mt.) and corresponding income(US\$) in 2001.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers Surdarban Forest.
History of the dataset	Siddiqi, N. A., 2001. Mangrove Forestry in Bangladesh. Institute of Forestry and Environmental Science, Chittagong University. ???, ???, 2001.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

### Sample of Data

Products	Year	Yield	Income
Fuel Wood	2001	291700	261775
Golpata (Nypa fruticans)	2001	68200	118000
Hental (Phoenix paludosa)	2001	6250	6000
Honey	2001	150	8000
Wax	2001	40	3000
Oyster	2001	325	1800
Crab	2001	1350	-
Grasses	2001	13500	700

Name of Data layer: **Irrigation Status in the Coastal Region**

### Metadata

Data Type	Simple Table
Abstract	A tabular data of the Irrigation Status in the Coastal Region of Bangladesh has been developed from the Bangladesh Bureau of Statistics.
Quality	Irrigation Status in the Coastal Region has been developed by using standard database application.
Completeness	This data covers the all costal region of Bangladesh.
History of the dataset	The source of this data is the Yearbook of Agricultural Statistics of Bangladesh-2009 of Bangladesh Bureau of Statistics.
Purpose of production	Irrigation Status in the Coastal Region is essential for any agriculture response and analysis, decision supports on existing status and planning for future development in Bangladesh. It also very important for crop market management and planning.
Process description	This data has been developed by using MS office Access application.

Name of Data layer: **Regional Distribution of Female Headed Farm Households**

### Metadata

Data Type	PDF File
Abstract	This data layer contains percentages of female headed farm holdings with farm size in exposed and interior zone which are categorized by location according to Bay of Bengal and in islands also.
Quality	This data layer has been collected from PDO-ICZMP.
Completeness	This data layer covers coastal, non-coastal area and whole Bangladesh.
History of the dataset	Analyzed using data from BBS, 1999 Women of the Coast & A Gender Status Paper on the Coastal Zone under PDO-ICZMP Project published in January 2004.
Purpose of production	
Process description	This layer has been generated through calculating figures from 1996 agriculture census on upazilas of the coastal zone. For clustering the upazilas delineation of the coastal zone (PDO-ICZMP WP005) has been followed. This layer has been produced as a part of drafting 'Women of the Coast - Gender Status Paper (PDO-ICZMP WP027)'.

### Sample of Data

**Regional distribution of female headed farm households**

Name of Data layer: **Fish Catch from Ponds**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains total catch from ponds in the 19 districts, total coastal zone and whole of Bangladesh in 2002-02.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 19 districts, total coastal zone and whole of Bangladesh.
History of the dataset	This data layer was collected from Fishery Statistical Yearbook of Bangladesh, Department of Fisheries. 2003.
Purpose of production	This data layer presenting district wise fish catch statistics of 19 coastal districts has been generated for use in fishery and other environment related analysis management and planning purposes.
Process description	It has been collected from the source and converted it to digital format and stored.

**Metadata**

Data Type	PDF File
Abstract	It is a graphical representation of Value of total and shrimp export earnings for Bangladesh in the period 1972/73 - 2000/01.
Quality	Quality of this data layer depends on the data collection and compilation procedure adopted by BCAS. ICRD has stored it only checking with the source.
Completeness	This graphical representation covers the coastal zone.
History of the dataset	A Systems Analysis of Shrimp Production' under PDO&ICZMP Project published in June 2003.
Purpose of production	
Process description	As a part of drafting the 'A Systems Analysis of Shrimp Production (PDO-ICZMP WP014)' this layer was prepared through collecting relevant information from BCAS document titled 'BCAS, 2001. The coastal shrimp sector in Bangladesh: review of the literature with annotated bibliography. Bangladesh Centre for Advanced Studies (BCAS), Dhaka, Bangladesh. March 2001.' during 2003.

**Sample of Data**

**Value of total and shrimp export earnings for Bangladesh in the period 1972/73 - 2000/01**

Name of Data layer: **Statistics of Brick Kilns**

### Metadata

Data Type	Simple Table
Abstract	This data layer reveals statistics of brick kilns with no. of licensed and without license brick kilns of 18 CZ districts and Bangladesh and with detailed information.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 18 coastal zone districts and Bangladesh.
History of the dataset	Bangladesh Disaster Report 2002. Disaster Preparedness Forum. Mohammadpur, Dhaka, June 2003.
Purpose of production	Disaster Forum (DF) is a Dhaka based National Disaster Preparedness Network is working for ensuring the accountability of the humanitarian and development agencies and to promote the rights of all vulnerable people. Besides all other informations forum collected the brick kiln informations.
Process description	It has been collected from the source and converted it to digital format and stored.

### Sample of Data

DistGeocode	District	Year	Total Brick Kilns	Licensed	Without License	Source Fuel	Comments
401	Bagerhat	2002	11	7		Coal / Root of 4 bamboo / Date tree	There is no depot of coal in this district.
104	Barguna	2002	37	37		-	-
106	Bartol	2002	-	-		-	-
109	Bhola	2002	20	20		Coal and other fuels	-
213	Chandpur	2002	86	62	24	Coal	Sources of fuel is not mentioned.
215	Chittagong	2002	329	193	136	Geo / Coal	23 illegal kilns have been stopped. Licenses of 10 kilns have been cancelled due to using wood as fuel. Licenses of 7 kilns have been cancelled due to destroying hills to make kilns.
222	Cox's Bazar	2002	38	21	17	Coal	-
236	Feni	2002	82	69	13	Coal	License still valid for 37 kilns and 12 kilns have to renew their license. To stop the illegal and invalid licensed kilns legal actions are taken.
335	Gopalganj	2002	32	22	10	Coal/Root of bamboo.	Sources of fuel are mentioned in case of kilns without license.
441	Jessore	2002	129	108	21	Coal / Root of 21 bamboo / Date tree	Date palm and root of bamboo is used simultaneously with coal even in licensed kilns.

Name of Data layer: **Arsenic Contamination Rate**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on arsenic contamination rate of 19 coastal districts.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers arsenic contamination rate of 19 coastal districts.
History of the dataset	This data layer was collected from Arsenic Contamination of Groundwater in Bangladesh, Vol 2, Final Report, 2001. Kinniburgh, D.G. and Smedley, P.L. (eds). Project for Ministry of Local Government, Rural Development and Co-operatives of Bangladesh, Department of Public Health Engineering (DPHE). British Geological Survey Report WC/00/19. British Geological Survey, Keyworth.
Purpose of production	This datalayer has been generated to have an idea on arsenic contamination in the coastal districts. It can assist in water resources and environmental planning and management. It can also be used in national and regional level planning.
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Household Number Consuming Less Calorie**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on percentage of household consuming less than 2122 Kilo Calorie and 1805 Kilo Calorie in the 19 coastal districts of Bangladesh.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 19 coastal districts.
History of the dataset	This data layer was collected from the report titled "Analysis of Basic Needs Dimension of Poverty" Volume III, Bangladesh Bureau of Statistics, Dhaka, August 1998.
Purpose of production	To measure the poverty situation through basic needs approach this datalayer was produced. This data will be of help for development planning and policy making specially in preparing and implementing poverty alleviation programs.
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Infant Mortality Rate by Sex and Locality**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on child death rate per 1000 children of ages 1-4 years by sex from 1990 to 1998. It is a timeseries data of 1 year interval with national, urban and rural area coverage.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers the coastal area.
History of the dataset	This data layer was collected from Statistical Year Book of Bangladesh. Bangladesh Bureau of Statistics. Dhaka, June 2002.
Purpose of production	This datalayer was developed to observe the situation of children of the country. Therefore it will be useful in different types of socio-economic analysis at both national and regional level.
Process description	It has been collected from the source and converted it to digital format and stored.

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on maternal mortality rate by districts in coastal zone from July 1998 to 1999 for 19 coastal districts, total coastal area and the entire Bangladesh.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 19 coastal districts, total coastal area and the entire Bangladesh.
History of the dataset	This data layer was collected from the report titled "Analysis of Basic Needs Dimension of Poverty" Volume III, Bangladesh Bureau of Statistics, Dhaka, August 1998.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Method of Treatment**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains information on distribution of households by method of treatment of both male and female population having agricultural and non agricultural occupation in national, urban and rural area in the year 2002.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers the coastal area.
History of the dataset	This data layer was collected from the Report of the Poverty Monitoring Survey, May 1999. Bangladesh Bureau of Statistics, Dhaka, January 2002.
Purpose of production	This datalayer was produced to get an idea about the type of medical treatment people get when they become ill. It will be helpful not only in health related and soio-economic study but national and regional planning as well.
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Percentage of Potable Water Source**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on percentage of potable water source.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 19 coastal districts and entire Bangladesh.
History of the dataset	This data layer was collected from the report titled "Progotir Pathay (on the Road to Progress) 2000", Bangladesh Bureau of Statistics and United Nations Children Fund, Dhaka, December 2000.
Purpose of production	Potable water source is very important socio-economic information. therefore it can be used in different type of socio-economic analysis and planning at national and regional level.
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Coast Guard Achievements of Bangladesh**

### Metadata

Data Type	Simple Table
Abstract	A tabular data of the Bangladesh Coast Guard Achievement information has been collected from Department of Bangladesh Coast Guard.
Quality	Quality of the data fully complies with the published source.
Completeness	This data covers the all districts of Bangladesh.
History of the dataset	The source of this data is the official website of Bangladesh Coast Guard.
Purpose of production	Bangladesh Coast Guard Achievement information is essential for those who are working on control piracy, illegal trafficking, protect fishery, oil, gas, forest resources and environmental pollution in Bangladesh waters and coastal areas, ensure overall security and law and order through security assistance to sea ports, conduct relief and rescue operation in the coastal areas during natural calamity in Bangladesh.
Process description	Data has collected from Department of Bangladesh Coast Guard, converted it to digital version and organized the data in an arranged way.

Name of Data layer: **VGD information of Costal Region**

### Metadata

Data Type	Simple Table
Abstract	A tabular data of the VGD information of costal area of Bangladesh has been collected from Department of Relief & Rehabilitation. Vulnerable Group Development (VGD), one of the main components of Country Programme, aims to promote self-reliance among the most vulnerable women, by providing them with food assistance and training in an alternative livelihood.
Quality	Quality of the data fully complies with the published source
Completeness	These information cover the all costal districts of Bangladesh.
History of the dataset	The source of the data is the Department of Relief & Rehabilitation.
Purpose of production	VGD information of costal area is essential for any disaster response and recovery analysis, decision supports on existing status and planning for future development in Bangladesh. It is also very important for disaster management and planning.
Process description	WARPO has collected it from Department of Relief & Rehabilitation, converted it to digital version and organized the data in an arranged way.

Name of Data layer: **Female Headed Household of Selective Upazilla**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on distribution of upazilawise female headed households of 19 coastal districts in 1996.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 19 coastal districts.
History of the dataset	This data layer was collected from Census of Agriculture 1996, Bangladesh Bureau of Statistics, Dhaka, July 1999.
Purpose of production	Agricultural statistics provides the basic input for the development strategy and for monitoring the progress of agricultural sector. This datalayer on female headed households can be used in agriculture related management and planning.
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Household Information 1991**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains thanawise household information of 19 coastal districts in 1991.
Quality	This data layer fully complies with the source.
Completeness	This data layer covers thanawise household information of 19 coastal districts in 1991.
History of the dataset	This data layer was collected from NWRD.
Purpose of production	The data layer has been generated so that it can be used in different type of socio-economic analysis at national and regional level.
Process description	ICRD collected this data layer from NWRD and stored it without any further modification.

Name of Data layer: **Internal Migration by Direction and Duration**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on internal migration by direction (urban-rural, rural-urban) and duration (10yr interval) of migration.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers the coastal area.
History of the dataset	This data layer was collected from Bangladesh Population Census, 1991: Volume 4, Socio-economic and Demographic Report. Bangladesh Bureau of Statistics. Dhaka, August 1999.
Purpose of production	This datalayer was generated to observe the migration pattern with a ten year interval. This data can be used in various socio-economic and demographic research and planning.
Process description	It has been collected from the source and converted it to digital format and stored.

Data Type	Simple Table
Abstract	This data layer contains urban, rural, male, female, total population of 76 thanas of Chittagang, Khulna, Jessore and Noakhali districts in 1974.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 76 thanas of Chittagang, Khulna, Jessore and Noakhali districts in 1974.
History of the dataset	This data layer was collected from Population Census 1974, Bangladesh Bureau of Statistics. Dhaka.
Purpose of production	Population data is required for every kind of research. The data layer has been generated so that it can be used in different type of socio-economic analysis as well as other research and analysis at national and regional level.
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Religious Communities of Selective Districts**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains distribution of religious communities (%) in Bangladesh and coastal divisions.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers Khulna div, Barishal Div, Chittagong Div and Bangladesh.
History of the dataset	This data layer was collected from Bangladesh Population Census, 1991: Volume 1: Analytical Report. Bangladesh Bureau of Statistics, Dhaka, September 1994.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

### Sample of Data

Name of Data layer: **Distribution of Monthly Expenditure**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on distribution of monthly expenditure, consumption expenditure, income tax, house and proper tax, gifts and assistance, remittance etc.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers whole coastal zone.
History of the dataset	This data layer was collected from the report of the Household Expenditure Survey,1995-96, Bangladesh Bureau of Statistics, Dhaka, April 1998.
Purpose of production	Expenditure data is very important socio-economic information on household level. This datalayer will help formulate policies related to poverty reduction, improvement in standard of living, socio-economic research and studies.
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Vulnerabilities by Occupations in PDSCL**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on occupations and vulnerabilities as revealed in PDSCL.
Quality	This data layer has been taken from PDO-ICZMP.
Completeness	This data layer covers vulnerable abilities in coastal areas.
History of the dataset	This data layer was collected from the Working Paper (no. 004) titled "Perceptions of Direct Stakeholders on Coastal Livelihood" under Program Development Office for Integrated Coastal Zone Management Plan Project; Water Resources Planning Organization; Ministry of Water Resources, Bangladesh, Dhaka, September 2002.
Purpose of production	
Process description	ICRD collected this data layer from ICZMP in digital form and stored it without any further modification.

Name of Data layer: **Acid Attack Cases, Divisionwise Comparison**

### Metadata

Data Type	PDF File
Abstract	This data layer contains a bar chart of division wise reported acid attacks.
Quality	This data layer has been taken from PDO-ICZMP.
Completeness	This data layer covers 6 divisions of Bangladesh.
History of the dataset	This data layer was collected from the Working Paper (027) titled "Women of the Coast & A Gender Status Paper on the Coastal Zone", Program Development Office for Integrated Coastal Zone Management Plan Project; Water Resources Planning Organization; Ministry of Water Resources, Bangladesh, Dhaka January 2004.
Purpose of production	
Process description	ICRD collected this data layer from ICZMP in digital form and stored it without any further modification.

### Sample of Data

**Division wise reported acid attacks**

Name of Data layer: **Arsenic Contamination in Drinking Water**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on arsenic contamination in drinking water.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers the coastal area.
History of the dataset	This data layer was collected from Arsenic Contamination of Groundwater in Bangladesh, Vol 2, Final Report, 2001. Kinniburgh, D.G. and Smedley, P.L. (eds). Project for Ministry of Local Government, Rural Development and Co-operatives of Bangladesh, Department of Public Health Engineering (DPHE). British Geological Survey Report WC/00/19. British Geological Survey, Keyworth.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Communicable Disease Information by Zone,1998**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on communicable diseases and malaria in 1998.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers the communicable disease information in coastal areas.
History of the dataset	This data was collected from the Statistical Year Book of Bangladesh 2000, Bangladesh Bureau of Statistics, Dhaka, December 2002.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

### Sample of Data

Disease	Year	Prevalence	Coastal Area	Rest of Bangladesh
Diarrhoea	1998	contracted (nr of people)	143639	388399
Diarrhoea	1998	contracted (% of population)	0.4	0.44
Diarrhoea	1998	death (nr of people)	457	823

Name of Data layer: **Household Expenditures, 2002**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains distribution of household consumption expenditure by income groups in 2000.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers household consumption expenditure by income groups.
History of the dataset	This data layer was collected from the Preliminary Report of Household Income & Expenditure Survey 2000, Bangladesh Bureau of Statistics. Dhaka, December 2001.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Household Income (Average)**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains statistics on average household income of people occupied in different sectors. This datalayer covers 19 districts of Bangladesh in 1991.
Quality	This data layer fully complies with the source.
Completeness	This datalayer covers 19 districts of Bangladesh in 1991.
History of the dataset	This data layer was collected from NWRD.
Purpose of production	The data layer provides district wise average household income of people engaged in different occupations. Therefore it can be used in different type of socio-economic analysis at national and regional level.
Process description	ICRD collected this data layer from NWRD and stored it without any further modification.

Name of Data layer: **Households by Poverty Measures, 1998**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains distribution of households by measurement of poverty in 19 coastal districts, total coastal zone and the entire Bangladesh in 1998.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 19 coastal districts, total coastal zone and the entire Bangladesh.
History of the dataset	This data layer was collected from the report titled "Analysis of Basic Needs Dimension of Poverty" Volume III, Bangladesh Bureau of Statistics, Dhaka, August 1998.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Composition of Rural Households**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on Composition of rural households on the basis of occupation and land ownership for the year 1983-84 and 1996.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers data on Composition of rural households.
History of the dataset	This data layer was collected from the Bangladesh Census of Agriculture and Livestock: 1983-84; Vol 1; Structure of Agricultural Holdings and Livestock Population, 1986 and Census of Agriculture 1996. Bangladesh Bureau of Statistics. Dhaka, July 1999.
Purpose of production	As the data layer reveals rural households information with land ownership and occupation therefore it can be used in different type of socio-economic analysis and planning at national and regional level.
Process description	It has been collected from the source and converted it to digital format and stored.

Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 19 coastal districts, total coastal zone and the entire Bangladesh.
History of the dataset	This data layer was collected from the Population Census 2001, National Report (Provisional), Bangladesh Bureau of Statistics, Dhaka, July 2003.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Agricultural Structure Statistics**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on summary statistics of agricultural structure in 1983-84 in the coastal districts, non coastal area.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers coastal districts, non coastal area.
History of the dataset	This data layer was collected from The Bangladesh Census of Agriculture and Livestock: 1983-84; Vol 1; Structure of Agricultural Holdings and Livestock Population.
Purpose of production	Agricultural statistics provides the basic input for the development strategy and for monitoring the progress of agricultural sector. This datalayer on Agricultural Structure can be used in agriculture related management and planning.
Process description	It has been collected from the source and converted it to digital format and stored.

Sample of Data

Name of Data layer: **Island Boundary**

### Metadata

Data Type	Simple Table
Abstract	Island defined as a tract of land surrounded by the waters of an ocean, sea, lake, or stream. The GIS layer of Char land boundary was derived from Digital Classification of IRS P6 LISS III Satellite images.
Quality	The data was generated in 2010 using IRS P6 LISS III Satellite image of 2008. The field validation of the captured data was not done. The resolution of the images is 23.5m.
Completeness	This data layer covers only Meghna Estuary Area.
History of the dataset	Four IRS P6 LISS III images ( Resolution 23.5 m) acquired on 24 February 2008 and 12 January 2008 were used for char land boundary identification. The projection system is in Bangladesh Transverse Mercator (BTM).
Purpose of production	This data layer of island boundaries is essential for any data analysis of coastal zone and thematic map preparation. It can be also use for national, regional and local level planning, analysis and management purposes.
Process description	Three classes named "Water", "Land" and "Mudflat" were extracted from the satellite images using unsupervised digital classification techniques. After classification a 5 x 5 filtering was run and converted to shape file using ArcGIS software.

Name of Data layer: **RHD Road (National)**

### Metadata

Data Type	Simple Table
Abstract	A spatial data layer showing the national road network of coastal area with other attribute information identified by Department of Roads and Highways (RHD).
Quality	Attribute information fully complies with the Annual Report 1997-98.
Completeness	The data layer covers all national roads in coastal area identified by the Department of Roads and Highway.
History of the dataset	Department of Roads and Highways generated this data layer.
Purpose of production	To represent the existing road network of coastal area and to estimate the total length of different types of roads for planning purpose.
Process description	This datalayer is extracted from datalayer of NWRD. After collecting this data layer in digital format, NWRD has updated it partly using IRS image of 1989 with 6 m resolution. Other attribute information have also been incorporated according to RHD Road NetWork Database and Annual Report for 1997-98 published by Department of Roads and Highway.

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on education status (Any education and primary education) of children aged 7-12 (with schooling) and aged 12-15 (who completed primary education).It contains data of 19 coastal districts.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 19 coastal districts.
History of the dataset	This data layer was collected from Saha,T.; Al-Sabir, A.; Montana, L.; Riggers,H.; Bhadra, K.S., 2003. Bangladesh District Level Socio-demographic and Health Care Utilization Indicators. Dhaka, Bangladesh and Calverton, Maryland (USA): National Institute of Population Research and Training (NIPORT) and ORC Macro. August 2003.
Purpose of production	This datalayer was developed to know the educational satus of children in the coastal areas. It can be used in different types of socio-economic analysis at both national and regional level.
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Primary School Growth**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on primary school growth from 1991 to 2001 for 19 coastal districts, total coastal, non coastal area and the entire Bangladesh.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 19 coastal districts, total coastal, non coastal area and the entire Bangladesh.
History of the dataset	This data layer was collected from Statistical Yearbook of Bangladesh 2001, 22nd Edition. Bangladesh Bureau of Statistics, Dhaka, December 2003, Statistical Yearbook of Bangladesh 1996, 17th Edition, Bangladesh Bureau of Statistics, Dhaka, November 1997 and a Working Paper titled "Coastal Livelihoods: Conditions and Context", Program Development Office for Integrated Coastal Zone Management Plan Project; Water Resources Planning Organization; Ministry of Water Resources, Bangladesh, Dhaka, June 2003.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Coastal Geology**

### Metadata

Data Type	Simple Table
Abstract	A spatial data layer containing the geological deposits of the coastal regions of the country.
Quality	The source map was printed in a scale of 1:1,00,000. Therefore, it is recommended that not used above the mentioned scale.
Completeness	The data layer covers whole Bangladesh printed in 1990.
History of the dataset	The map was prepared by Geological Survey of Bangladesh (GSB) and United Geological Survey of Bangladesh (USGS) in 1990. The base was compiled from LANDSAT satellite mosaic of 1984 with SPARRSO and other available topographic maps. A number of documents, papers and maps were used as the source to derive the information.
Purpose of production	The map was prepared to present the overall geological formation of the country. It is classified in a number of map units describing the alluvial deposits and bed rock formation.
Process description	The data was captured from the Geological Map of Bangladesh (1990). The projection system of the source map was in Lambert Conformal Conic (LCC) projection system. It was transformed into Bangladesh Transverse Mercator (BTM) projection system. International boundary was incorporated from SOB TOPO map 1: 50,000 map and the coastal boundary was updated from IRSLiss 2005 image.

Name of Data layer: **Landuse**

### Metadata

Data Type	Simple Table
Abstract	The spatial data layer showing coastal land use. Land use is the human use of land. Land use involves the management and modification of natural environment or wilderness into built environment such as fields, pastures, and settlements. It has also been defined as the arrangements, activities and inputs people undertake in a certain land cover type to produce, change or maintain it.
Quality	The satellite images were georeferenced using Differential Global Positioning System (DGPS) to achieve better positional accuracy. The positional accuracy of the satellite image is ( $\pm 2m$ ). The classification accuracy is also high as ground truth data were used during classification.
Completeness	The data layer covers part of the coastal zone.
History of the dataset	Source of the data layer is IRS P6 LISS III Multispectral image of 2008 Spatial resolution: 24x24 meters
Purpose of production	Land use and land management practices have a major impact on natural resources including water, soil, nutrients, plants and animals. Land use information can be used to develop solutions for natural resource management issues such as salinity and water quality
Process description	Digital image processing technique has been used to classify the satellite image for the generation of the coastal land use map. For better accuracy of the classification ground truth field data has been used during classification process.

Name of Data layer: **Settlement**

### Metadata

Data Type	Simple Table
Abstract	A spatial data layer showing the location boundary of settlement in the coastal zone. A settlement is a contiguous area around rural house containing trees, nursery ground, garden vegetation etc. and separated from agriculture land.
Quality	Data was captured in 1:8000, it should be used in same scale or smaller than this.
Completeness	The data layer covers all the project locations along the coastal zone.
History of the dataset	Source of the data layer is IRS Panchromatic image from 2000 onward with Spatial resolution: 6x6 meters
Purpose of production	To present and store distribution of the settlement of coastal zone and to use this data in any kind of socio-economic analysis and management purpose.
Process description	Visual interpretation has been done to delineate the settlement boundary (Mixed area having patches of very high and very low intensity). Also, visual assistance has been taken from Landsat TM mosaic (1997) of Bangladesh with the backdrop of road and necessary GIS data layers geo-referenced with TM image. Settlement has been digitized in the 1:8000 scale But to develop understanding of the area and surrounding, image can be explored in different zoom factor

Data Type	Simple Table
Abstract	This data layer contains data on wind turbine installations in the coastal zone.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers the coastal zone.
History of the dataset	This data was collected from Utilization of Renewable Energies in Bangladesh by M. Islam. Electronic Book #1. Shakti Energy website of Bangladesh ( <a href="http://shakti.hypermart.net">http://shakti.hypermart.net</a> ), August 2002.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Information of Killa**

### Metadata

Type of dataset	Simple Table
Abstract	A tabular data contains the Killa information of Coastal district. Killa artificially built mounds or hillocks in the coastal regions traditionally used as cyclone shelter for cattle or even human beings. Usually, killas are 10 to 15 m high.
Quality	Quality of this data layer depends on the data collection and analysis process of the source organization.
Completeness	This data covers the costal districts of Bangladesh.
History of the dataset	The source of this data is Cyclone Preparedness Programme (CDMP).
Purpose of production	Killa information is essential for any disaster response and recovery analysis, decision supports on existing status and planning for future development in Bangladesh. It also very important for disaster management and planning.
Process description	ICRD has converted and synthesized the data layer from hard copy to digital format and organized it in an ordered format.

Name of Data layer: **Polder Information**

### Metadata

Type of dataset	Shapefile
Abstract	A spatial data layer has shown the BWDB polder location in coastal area along with attribute information.
Quality	The data layer has been created following the ECDS maps and WSIP attribute database. Some anomaly has been observed during data appending operation. Further quality checking and field verification are needed for this data layer.
Completeness	The data layer covers all the project locations along the coastal zone identified by BWDB.
History of the dataset	Source of this data layer is the hard copy maps at 1: 50,000 scale, prepared by Engineering Consultancy and Development Services Ltd. (ECDS) under the project 'Updating the Inventory of Water Development Systems - BGD/87/021 of UNDP1991'. Besides BWDB Jurisdiction Maps at 1:1,25,000 and 1: 2,50,000 scales, have also been used in some cases. Digital attribute database of 1999 and 2005 derived from Water Sector Improvement Project (WSIP) of BWDB has also been used as attribute information. Also, used IRS image (6mX6m) and some of projects have been verified by field visit under the project WAMIP
Purpose of production	This data layer is essential for identification the location of the polders and to help water sector planning and decision supports for project monitoring and management.
Process description	The data layer has been captured from the published maps (prepared by ECDS) of 1991 at 1:50,000 scales. The digitization has been done under Arc/Info GIS environment. After data capturing, map features were adjusted manually with respect to river database (captured from LANDSAT 97 with 30m resolution), high resolution IRS image (6m X6m) and some of projects have been verified under the project WMIP. The attribute information derived from WSIP of BWDB, has been incorporated to the spatial data layer.

Type of dataset	Shapefile
Abstract	A light house is a tower or other type of structure designed to emit light from a system of lamps and lenses used as an aid to navigation for pilots at sea or on inland waterways. A set of spatial data layer of light houses in Bangladesh along with the attribute information derived from the source of Chittagong Port Authority.
Quality	Source of the light houses information is a point data in standard GIS format with WGS1984 datum.
Completeness	There are only 7 light houses in Bangladesh, situated at Cox's Bazar and Khulna districts.
History of the dataset	Chittagong Port Authority is the source of this dataset . The coordinates of location and other flashing characteristics of light houses were provided by the source in text file. It is a set of seven (7) Light Houses information and was digitized as shape file using ArcGIS 9.2. The projection system is Bangladesh Transverse Mercator (BTM). Attribute information are distributed according to the source.
Purpose of production	Lighthouses are used to mark dangerous coastlines, hazardous shoals and reefs, and safe entries to harbors, and can also assist in aerial navigation.
Process description	The Light House information collected from Chittagong Port Authority. Other attributes were joined with the location of the light houses. This data layer has been projected in BTM projection.

Name of Data layer: **Export and Import at Ports**

### Metadata

Type of dataset	Simple Table
Abstract	This data layer contains the export and import tonnage (mt) at Chittagong and Mongla ports from 1990 to 2000.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers Chittagong and Mongla ports.
History of the dataset	This data was collected from the Statistical Year Book of Bangladesh 2000, Bangladesh Bureau of Statistics, Dhaka, June 2002.
Purpose of production	
Process description	It has been collected from the source and converted it to digital format and stored.

### Sample of Data

Financial Year	Port Name	Export	Import
1990-1991	Chittagong port	919	6282
1991-1992	Chittagong port	770	6268
1992-1993	Chittagong port	1120	6496

Name of Data layer: **Islands and Chars Information**

### Metadata

Type of dataset	Simple Table
Abstract	This data layer contains data on area, population and number of Islands and Chars of 13 coastal districts.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers 13 coastal districts.
History of the dataset	Source of this data layer is Inventory of Coastal & Estuarine Islands & Char Lands, (Paper no.06) Draft report of Program Development Office for Integrated Coastal Zone Management Plan Project, Water Resources Planning Organization; Ministry of Water Resources, Bangladesh. Dhaka, August 2001.
Purpose of production	This datalayer has been created with a view to make an inventory of islands, for collecting additional information and to use this information on coastal zone planning.
Process description	It has been collected from the source and converted it to digital format and stored.

**Metadata**

Type of dataset	Simple Table
Abstract	The coastal area possesses rich and diverse genetic resources of Fauna because of its climate and fertile land. Due to the degradation of ecosystem many species are now extinct and many more species are listed as threatened or endangered. Information of Coastal Fauna is collected from the report of the project Survey of Fauna carried out under National Conservation Strategy (NCS) Implementation Project 1, in the year 2001 for the Ministry of Environment and Forest, Government of the People's Republic of Bangladesh.
Quality	Information of Coastal Fauna is collected as secondary data from the Final Report on the Project "Survey of Fauna" of the National Conservation Strategy Implementation Project-1, Survey conducted by Bangladesh National Herbarium in July 2001 under the Ministry of Environment and Forest, Government of the People's Republic of Bangladesh.
Completeness	It is a rich list of costal Fauna describing species local and family name, their locality habitat etc. The study area is covered coastal area of Bangladesh.
History of the dataset	The source of this dataset is Final Report on the Project "Survey of Fauna" of the National Conservation Strategy Implementation Project-1, Survey conducted by Bangladesh National Herbarium in July 2001 under the Ministry of Environment and Forest, Government of the People's Republic of Bangladesh.
Purpose of production	Information of coastal Fauna is a very useful data for the Ecologists, Biologists and Researchers. It is also important for the sustainable management of the Bay of Bengal marine ecosystem.
Process description	The tabular data of Information of Coastal Fauna is collected as secondary data from the Final Report on the Project "Survey of Fauna" of the National Conservation Strategy Implementation Project-1, survey conducted by Department of Zoology, University of Dhaka in July 2001 for the Ministry of Environment and Forest, Government of the People's Republic of Bangladesh. The hard copy book scanned as OCR and formed as standard database format.

Type of Species	Type of Plant Species	
Scientific name	Scientific name of the plant species	
Local Name	Local name of the plant species	
Family Name	The Family name of the plant species	
Study Area	Surveyed area	
Locality	Local name of the surveyed area	
Habitat Type	Description of characteristic appearance of a plant (Habitat type). C = Climber; E = Epiphytic; F = Filamentous, microscopic; H = Herb; M=Mangrove; P = Parasite; S = Shrub; T = Tree; TH = Thalloid/micro or macro thallus	
Habitat (MACRO)	Macro habit of a plant. AQU = Aquatic; CLI = Climber, EPI = Epiphyte; LOW = Low land; MAN = Mangrove; MAR = Marshy place; PL = Plain land; PLA = Planted; R = On rocks/entangled with other seaweeds under sea water in the intertidal zone; SAD=Sand Dune; SAN = Sandy; SCR = Scrub; TER=Terrestrial; TRF = Tropical rain forest, WET = Wet land	
Habitat (MICRO)	Micro habit of a plant. BAN = Bank; CLE = Clearing; CLI=Climber on trees; CL=Cultivated land; DF = Deep forest; DRY = Dry; DT = Ditch; E = Epiphyte on other marine algae; FL = Fellow land; FM = Forest Margin; HF = Hill forest; HOM = Homestead; HS= Hill Slope; MAR = Marshy; MOI = Moist; OPL = On plant; PLA = Planted; PO = Pond; RS = Road side; SAD = Sand dune; SAN = Sandy; SEA = Sea coast; SF = Secondary Forest; SHA = Shady; SWA = Swamp; UND = Under growth	
RelativeAbundance	Availability of a plant. V = Very common; C = Common; O = Occasional; S = Scarce; R = Rare	
Ethonouses	Traditional uses of plants. F = Food; FD = Fodder; FI = Fiber; FS = Fishing; FW = Fire wood; G = Gum; M = Medicine; O = Oil; OR = Ornamental; SO = Soil binder; SP = Spices; T = Timber, TH = Thatching; OT = Others	
IUCN Categories	IUCN Red List Categories of plant. CR = Critically Endangered; EN = Endangered; VU = Vulnerable; LR = Lower risk; LR(Ic)= Lower Risk (least concern); DD = Data Deficient; NE = Not evaluated	
Status	Nationally risk status of a plant species. CR = Critically Endangered; EN = Endangered; VU = Vulnerable; LR = Lower risk; DD = Data Deficient; NE = Not evaluated	

Name of Data layer: **Landuse of ECA area**

### Metadata

Type of dataset	Shapefile
Abstract	This spatial data layers containing the Landuse and Landcover of ECA area. Ecologically Critical Area ecologically defined areas or ecosystems affected adversely by the changes brought through human activities. In some cases where ecosystem is considered to be threatened to reach a critical stage. The Landuse classes are: - Road, Settlement, River/Canal, Open/Agri Land, Water Bodies, Gher, Saltpan, Beach, Inter Tidal Zone, Industrial Area, Protected Forest, Reserve Forest Airport, Riverport and Sea.
Quality	Scale of the Google Earth Image by which the features were extracted was 1:5000 ft. Therefore, it is recommended that in any kind of analysis the data layer should not be used exceeding above upazila.
Completeness	This data covers the costal district of Bangladesh.
History of the dataset	Google Earth Image was used to produce these Landuse and Land Cover. Some data of the Landuse of the study area were taken from another project-"Preparation of Master Plan Agri. Develop. In Southern Delta". The Land Use data (the data of Forest) was collected from ARIS (the Secondary Data).
Purpose of production	Landuse of ECA will help to promote and implement a system of biodiversity conservation and sustainable management of the ecosystem so that the ecological balance can be maintained.
Process description	The features were extracted 1:5000 scale range from Google Earth Image. All the features (Landuse) except road were digitized as polygon. Roads were digitized as a single line feature. Then, road width was given and created polygon using that road width from buffer. While extracting features from Google Earth Image all the dataset were saved as kml file and it was converted into shapefile. The projection of the shapefile was then transfrom to Everest 1830 from WGS 1984.

Name of Data layer: **Fish Catch by Species for All Rivers**

### Metadata

Data Type	Simple Table
Abstract	The data layer contains coastal districts wise annual Fish catch information of all rivers from 1995-96 to 2008-09.
Quality	The data layer fully complies with Fishery Statistical YearBook of Bangladesh.
Completeness	Information is available for 19 coastal districts according to BBS census.
History of the dataset	The data was collected by the Department of Fisheries, Govt. of Bangladesh.
Purpose of production	The data layer has been generated with a view to inform coastal district wise fish catch statistics and to use this data in fishery and other environment related analysis management and planning purposes.
Process description	ICRD has collected the data from Fishery Statistical Yearbook of Bangladesh, and converted it to digital version and stored it in an organized way.

### Metadata

Data Type	Simple Table
Abstract	The data layer reveals 19 coastal district-wise annual total fish catch statistics from beels and the area of beels from 2002-03 to 2008-09.
Quality	The data layer fully complies with the published source.
Completeness	Information is available for 19 coastal districts according to BBS census.
History of the dataset	Areas of the beel were generated by SPARRSO and published in SPARRSO Report (Beels & Dead River) and the fish catch is collected from Catch Assessment Survey by the Fisheries Resource Survey System, Department of Fisheries. Catch of Jamalpur is included i
Purpose of production	The data layer has been generated with a view to calculate total fish catch from beels and to give a comparative view of the production of previous years.
Process description	ICRD has accumulated the data from NWRD.

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on annual fish catch from flood land in metric ton for the year 1995-96 to 2008-09 for 19 coastla districts.
Quality	This data layer fully complies with the source.
Completeness	This data layer covers 19 coastla districts.
History of the dataset	This data layer was collected from NWRD.
Purpose of production	The data layer has been generated with a view to calculate total fish catch from flood lands, to provide a comparative view of the production of previous years for 19 coastla districts and to use this data in fishery and other environment related research and planning purposes.
Process description	ICRD collected this data layer from NWRD and stored it without any further modification.

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on annual fish catch (metric ton) by species from Kaptai lake for the year 1983-84 to 2008-09.
Quality	This data layer fully complies with the source.
Completeness	This data layer covers Kaptai lake.
History of the dataset	This data layer was collected from NWRD.
Purpose of production	The data layer has been generated to provide total fish catch by species from Kaptai lake, to provide a comparative view of the production of previous years and to use this data in fishery and other environment related research and planning purposes.
Process description	ICRD collected this data layer from NWRD and stored it without any further modification.

Name of Data layer: **Fish Catch from Main Sources**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on capture of fisheries production from main resources in the coastal districts from 1996-97 to 2000-2001.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers the coastal districts.
History of the dataset	This data has been compiled from the Fishery Statistical Yearbook of Bangladesh 2000-2001, Fisheries Resources Survey System, Department of Fisheries and from a report titled "'Profile of the Coastal Zone of Bangladesh": Edition 2003.' under Program Development Office for Integrated Coastal Zone Management Plan Project; Water Resources Planning Organization; Ministry of Water Resources, Bangladesh. Dhaka, September 2003.
Purpose of production	This data layer has been generated to present and calculate total fish and shrimp catch from main sources such as river, Sundarban, beel, floodland, pond, baor and shrimp farm, and to provide a comparative picture of the production of previous years in the coastal year.
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Marine Fishing Zone**

### Metadata

Data Type	Simple Table
Abstract	The spatial data layer shows the marine fishing zone of Bay of Bangle which is largely confined within a depth of 100 meters.
Quality	Quality of this data layer depends on the data collection and analysis process of the source organization.
Completeness	This data layer covers coastal zone of Bangladesh.
History of the dataset	The map and other relative information has been collected from the Banglapedia (website publication, 2006), Fishery Country Profile of Bangladesh of Food and Agriculture Organization of the United Nations, 2007, Areas with Special Status in the Coastal Zone, Working Paper, WP030, by Program Development Office for Integrated Coastal Zone Management Plan (PDO-ICZMP), 2004 and the Department of Fisheries, Govt. of Bangladesh.
Purpose of production	This data layer can be used in different fish resource related analysis . Also, helps the planners to know the location of marine fishing area and to protect marine fishing eco system and marine environment.
Process description	The data layer has been captured from the published marine fishing zone map. The digitization has been done using ArcGIS environment. The attribute information derived from hard copy map. The source map was geographic projection. It's transformed into Bangladesh Transverse Mercator (BTM) projection system.

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on distribution of forest land (ha) in the coastal zone in 1998.
Quality	The data layer fully resembles with the published source.
Completeness	This data layer covers the coastal zone.
History of the dataset	This data layer was collected from NWRD.
Purpose of production	The data layer provided information of forest area distribution by coastal districts. This can be used for planning purposes.
Process description	ICRD has collected it from NWRD.

Name of Data layer: **Shallow Aquifer of Some Thanas**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains information on shallow aquifer of some thanas.
Quality	The data have been collected by NMIDP. The quality and accuracy of the data depends on the data collection and compilation method.
Completeness	This data layer covers some thanas of coastal zone.
History of the dataset	This data layer was collected from NWRD.
Purpose of production	To present information regarding the physical and hydraulic characteristics of aquifers that are important considerations for determining the possibilities and cost of ground water well construction for different purposes.
Process description	This data layer was collected from NWRD.

Name of Data layer: **Agricultural Land Types, 1996**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains distribution of agricultural land types (in ha) of 19 coastal districts in 1996.
Quality	The data layer fully resembles with the published source.
Completeness	This data layer covers 19 coastal districts.
History of the dataset	This data layer is collected from Statistical yearbook of Bangladesh 2000, Bangladesh Bureau of Statistics, Dhaka, June 2002.
Purpose of production	The data layer is prepared to observe the overall generalized agriculture land types of the coastal districts. It will help in planning the future agriculture expansion and development strategy.
Process description	It has been collected from BBS and converted it to digital format and stored.

Land Use	Land Use	
Sodium	Sodium	OM% (Optimum Moisture)
Salinity	Soil Salinity	decisiemens per meter (ds/m)
pH	pH of Soil	

**Metadata**

Data Type	Simple Table
Abstract	This data layer describes soil properties (chemical) in some major islands of the coastal region.
Quality	The quality depends on the source.
Completeness	This data layer covers some major islands of the coastal region.
History of the dataset	Source of this data layer is The Alluvial Plains of Bangladesh, 2000. In: Rahman, A.A.; Huq, S.; Conway G.R. (eds.). Environmental aspects of surface water systems of Bangladesh. The University Press Limited.
Purpose of production	It can be used in agricultural and soil related studies.
Process description	It has been collected from the source and converted it to digital format and stored.

**Sample of Data**

Char Name	pH	Electric Conductivity	Sodium	Potassium	Calcium	Magnesium
Katka island	6.5	3500	1850	49	2250	680

Name of Data layer: **Coastal Urban Landuse**

### Metadata

Data Type	Simple Table
Abstract	This spatial data layer containing coastal urban area landuse includes road, railway, market/institution/office/others, settlement, river/canal, agricultural land and open water.
Quality	The features were extracted at the scale of 1:5000. Therefore, it ensure the quality 1:5000 scale or more.
Completeness	This data covers the costal area of Bangladesh.
History of the dataset	QuickBird Images of 60 cm resolution from 2007 to 2010 were used to produce these Land Use. CEGIS has captured data from QuickBird Image 2007 to 2010
Purpose of production	Urban area Landuse helps urban area analysis to prepare development plan and explore the change and existing trend.
Process description	The features were extracted 1:5000 scale range from QuickBird Image. All the features were digitized individually as polygon. Features were then updated into one shapefile and produced a full dataset of Land Use of specific study area.

### Sample of Data

*Attribute Table*

Code	Landuse	Area
3	Market/Institution/Office/Others	3485.84

Name of Data layer: **Pond and Shrimp Ghers (Area), 2001-02**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains area under pond and shrimp ghers of 19 coastal districts in 2001-02.
Quality	The quality depends on the source.
Completeness	This data layer covers 19 coastal districts.
History of the dataset	Source of this data layer is Fishery Statistical Yearbook of Bangladesh 2001-2002, Fisheries Resources Survey System, Department of Fisheries, Dhaka 2003.
Purpose of production	The data layer was developed with a view to have an idea about the total area under pond and shrimp ghers.
Process description	It has been collected from the source and converted it to digital format and stored.

### Sample of Data

DistGeocode	District	Year	Pond Area	Shpm Area

Name of Data layer: **Godown Facility**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains information on storage facility(godown) of the districts of coastal area.
Quality	This data layer has been taken from PDO-ICZMP
Completeness	This data layer covers the districts of coastal area.
History of the dataset	Source of this data layer is Bangladesh Population Census 1991: Volume 3. Urban Area Report. BBS.Dhaka, November 1997; Statistical Yearbook of Bangladesh, BBS, Dhaka 2000; Population Census 2001:Preliminary Report, BBS, Dhaka, August,2001. (www.bbs.gov.org/zillapfile)
Purpose of production	The data layer is prepared to have an overall idea about the availability of godown facility in the coastal area. The data will help in planning the future agriculture expansion and development strategy.
Process description	It has been collected from the source and converted it to digital format and stored.

Data Type	Simple Table
Abstract	This data layer contains irrigation facilities of the districts of coastal area.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers the districts of coastal area.
History of the dataset	Source of this data layer is Bangladesh Population Census 1991: Volume 3. Urban Area Report. BBS.Dhaka, November 1997; Statistical Yearbook of Bangladesh, BBS, Dhaka 2000; Population Census 2001:Preliminary Report, BBS, Dhaka, August,2001. (www.bbs.gov.org/zillapfile)
Purpose of production	The data layer is prepared to have an overall idea about the irrigation facilities of the coastal area. The data will help in planning the future agriculture expansion and development strategy.
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Air Pollution by Different Vehicles**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on air pollution contribution by different vehicles.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers different vehicles for air pollution.
History of the dataset	This data layer was collected from Bangladesh Compendium of Environment Statistics, 1997. Bangladesh Bureau of Statistics. Dhaka, February 1999.
Purpose of production	This datalayer provides data on air pollution. So it can be used in environmental planning and management.
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Relative Humidity (Average)**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on average monthly relative humidity (%) in Barisal, Chittagong, Cox's Bazar, Jessore, Khulna, Noakhali and Satkhira.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers Barisal, Chittagong, Cox's Bazar, Jessore, Khulna, Noakhali and Satkhira.
History of the dataset	Source of this data layer are the Statistical Yearbook of Bangladesh, 2000, Bangladesh Bureau of Statistics, Dhaka June 2002 and Bangladesh Meteorological Department (BMD) .
Purpose of production	Relative humidity is an essential meteorological parameter in many hydrological and hydro-meteorological analysis. Purpose of storing this data is to provide information to planners and researchers in this regard.
Process description	It has been collected from the source and converted it to digital format and stored.

**Metadata**

Data Type	Simple Table
Abstract	This data layer describes the chronology of major cyclonic storms and tidal surge in the coastal area.
Quality	
Completeness	This data layer covers the coastal area.
History of the dataset	No source.
Purpose of production	
Process description	

**Sample of Data****Chronology of major cyclonic storms and tidal surge in Coastal Area:**

Year	Month and date of occurrence	Nature of the phenomena	Point of landfall	Affected area
1981	10th Dec	Severe cyclonic storm(H)	Khulna near Sundarban	Offshore Island and chars of Khulna, Barisal, Patuakhali
1983	14-15 Oct	Severe cyclonic storm	Chittagong coast near the Feni river	Ctg, Nkhali & their offshore island, chars
1983	5-9 Nov	Severe cyclonic storm(H)	Chittagong, Cox'sbazar near Kutubdia	Ctg, Cox's(Kutubdia, St martin, Teknaf,Ukhla, Molpong, Barisal, Pkhal, noakhali)
1985	24-25 May	Severe cyclonic storm	Chittagong, Noakhali coast near Chittagong	Ctg, Nkhali, Cox's & their offshore island
1986	08-09 Nov	Cyclonic storm	Chittagong, Patuakhali coast	Offshore Island and chars of Ctg, Barisal, Patuakhali, Noakhali
1988	24-30 Nov	Severe cyclonic storm	Khulna coast near Raimongol	Khulna, Jessore, Kushtia, Barisal, Faridpur offshore Island and chars
1991	25-29 April	Severe cyclonic storm(H)	Chittagong, Cox'sbazar coast near Chittagong	Ctg, Cox's, Noakhali, Barisal, Patuakhali
1991	31 May-02 June	Cyclonic storm	Patuakhali, Ctg coast near meghna estuary	Offshore Island and chars of Noakhali, Ctg, Barisal, Patuakhali
1992	17-19 May	Cyclonic storm	Chittagong, Cox'sbazar near Teknaf	Offshore Island and chars of Cox's
1992	17-21 Nov	Severe cyclonic storm(H)	Bangladesh, Myanmar coast	Offshore Island and chars of Cox's
1994	29 April-03 May	Severe cyclonic storm	Cox'sbazar coast near Teknaf	Offshore Island and chars of Cox's
1995	7-10 Nov	Severe cyclonic storm(H)	Weakend and cross sundarban coast	Offshore Island and chars of Cox's
1995	21-25 Nov	Severe cyclonic storm	Cox'sbazar coast near Cox'sbazar	Offshore Island and chars of Cox's
1996	7-8 May	Cyclonic storm	Chittagong, Teknaf coast near Cox'sbazar	Offshore Island and chars of Cox's
1996	26-29 Oct	Cyclonic storm	Sundarban coast	Offshore Island and chars of Cox's
1997	16-19 May	Severe cyclonic storm(H)	Chittagong, Feni coast near siltakunda	Offshore Island and chars of Ctg, Cox's, Noakhali, Bhoia
1997	25-27 Sep	Severe cyclonic storm(H)	Noakhali, Chittagong coast near siltakunda	Offshore Island and chars of Ctg, Cox's, Noakhali, Bhoia
1998	16-20 May	Severe cyclonic storm(H)	Chittagong coast between Ctg Siltakunda	Offshore Island and chars of Ctg, Cox's, Noakhali
1998	19-22 Nov	Cyclonic storm	Sundarban coast near Raimongol	Offshore Island and chars of Cox's

Name of Data layer: **Rainfall (Average),1999**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on monthly average rainfall in Barisal, Chittagong, Cox's Bazar, Feni, Jessore, Khulna and Patuakhali in 1999 (mm).
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers Barisal, Chittagong, Cox's Bazar, Feni, Jessore, Khulna and Patuakhali.
History of the dataset	Source of this data layer are the Statistical Yearbook of Bangladesh, 2000, Bangladesh Bureau of Statistics, Dhaka, June 2002 and Bangladesh Meteorological Department (BMD) .
Purpose of production	Rainfall data is an essential parameter in hydrology and environment related studies. Therefore, to support this type of work this data layer has been prepared.
Process description	It has been collected from the source and converted it to digital format and stored.

Name of Data layer: **Sunshine Hours (averages from 1997-2001)**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on hours of bright sunshine in coastal areas (averages from 1997-2001) in Barisal, Chittagong, Cox's Bazar, Khulna and Satkhira.
Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers Barisal, Chittagong, Cox's Bazar, Khulna and Satkhira.
History of the dataset	This data layer was collected from the Bangladesh Meteorological Department (BMD) .
Purpose of production	Sunshine-hour is an important parameter in hydro-meteorological and climatic analysis. This data layer was accumulated to provide this information as time series.
Process description	It has been collected from the source and converted it to digital format and stored.

Quality	The quality of the data set solely depends on the source.
Completeness	This data layer covers distribution of cyclone landfall over the coasts.
History of the dataset	This data layer was collected from Tropical Cyclone in Bangladesh by Md. Sazedur Rahman. Quarterly Nirapad Newsletter, 4th issue. Dhaka, September, 2001.
Purpose of production	To identify the risk intensity of cyclone throughout the country and to use this data layer in different analysis and planning purpose.
Process description	It has been collected from the source and converted it to digital format and stored.

### Metadata

Data Type	Simple Table
Abstract	A set of spatial data layer of Salt farming fields of Coastal zone along with the attribute information derived from study of GIS based Salt Industries Information System (GSIIS) 2007 by Bangladesh Small and Cottage Industries Corporation (BSCIC).
Quality	Industry location generated as point data using GPS with WGS1984 datum.
Completeness	This data layer covers all coastal districts of Bangladesh where salt is cultivated.
History of the dataset	The source of this dataset is GIS based Salt Industries Information System (GSIIS) of Bangladesh Small and Cottage Industries Corporation (BSCIC), which is surveyed using GPS during 2007. The projection system is Bangladesh Transverse Mercator (BTM). Attribute information were attached according to the questionnaire used for the survey.
Purpose of production	This data layer is essential for the development of salt farming system as well as production and demand of crude salt in Bangladesh.
Process description	Salt farming field areas are collected as primary data using GPS. Other attribute information have been attached according to the physical survey using questionnaire in 2007. Salt farming fields are as point data projected in BTM projection.

### Metadata

Data Type	Simple Table
Abstract	A spatial data layer of 228 Industries located in the coastal districts of Bangladesh along with the attribute information derived from the study of GIS based Salt Industries Information System (GSIIS) 2007 by Bangladesh Small and Cottage Industries Corporation (BSCIC).
Quality	Industry location generated as point data using GPS with WGS1984 datum.
Completeness	This data layer covers all coastal districts of Bangladesh
History of the dataset	The source of this dataset is GIS based Salt Industries Information System (GSIIS) of Bangladesh Small and Cottage Industries Corporation (BSCIC), which is surveyed physically using GPS during 2007. The projection system is Bangladesh Transverse Mercator (BTM). Attribute information were attached according to the questionnaire used for the survey.
Purpose of production	This data layer of Salt Industry is essential for any data analysis and decision supports to monitor industries producing iodide salts and management practices those who are responsible for the environmental and health related activities. It is very important data for planning, analysis and management purposes for existing industries as well as for the requirement of new establishments.
Process description	Industry locations are collected as primary data using GPS. Other attribute information have been attached according to the physical survey using questionnaire in 2007. Industry location as point data projected in BTM projection.

Type of dataset	PDF File

### Sample of Data

**Seasonal variation of the mean tide level**

**Metadata**

Data Type	Simple Table
Abstract	Flood regime in the coastal zone will be affected by climate change. Depth of inundation due to storm surge might be aggravated due to the increase in intensity of cyclones and projected rise in the sea level. This dataset shows the information regarding the possible change in the coastal flood regime due to combined effect of storm surge and sea level rise.
Quality	This data layer contains risk exposure zones which are formed by grouping grid points into one of five risk zones in respect to inundation (No risk, 0-1 m, 1-3 m, 3-6m and more than 6m).
Completeness	This data layer covers the coastal region of Bangladesh.
History of the dataset	The source of the dataset is Economics of Adaptation to Climate Change (EACC) study carried out by the World Bank and as a part of the study cyclone-related risks under the climate change scenario were developed by the Institute of Water Modelling (IWM)
Purpose of production	This data layer will be useful in assessing the impact on the coastal region of Bangladesh as well as planning adaptation measures, especially for the water sector.
Process description	A set of five storms that span the entire Bangladesh coastline is simulated using 2-D mathematical models. Simulations of the 1974, 1988, 1991, and 2007 cyclones were considered so that these cyclones adequately cover the Sunderban coast, southwestern coast (Sunderban to Patuakhali), the Bhola and Noakhali coast in the Meghna Estuary, and the eastern coast (Shitakunda to Bashkhali). In addition, a fifth hypothetical track was simulated to cover the remaining Sandwip coast and the part of the Noakhali and Chittagong coasts at the central region of the Meghna Estuary. The inundation risk exposure for the climate change scenario is developed from simulations combining these five cyclones with the Bay of Bengal hydrodynamic model. Each of the simulations is based on the following three assumptions about the increasing intensity of an average 10-year return period cyclone brought about by climate change by 2050. ı A rise in sea level of 27cm (UK DEFRA 2007) . ı An increase in wind speed by 10 percent relative to Cyclone SIDR. ı Landfall occurs during high tide. Inundation risk exposure for each scenario is determined in three steps. First, the extent and depth of inundation associated with each cyclone (nineteen for the baseline and eight for the climate change scenario) is determined based on simulations using the cyclone model and the two-dimensional Bay of Bengal model . Second, for each grid point, the inundation depth results from each of the cyclone simulations for the scenario are combined together to determine the highest inundation depth for all simulated cyclones under that scenario. All of the simulations are based on the existing set of coastal protection infrastructures (embankments, and polders).

*Attribute Table*

Bundle Information (Data Field Description and Unit)

Name of Data layer: **Projected Temperature and Global Sea Level Rise**

### Metadata

Data Type	Simple Table
Abstract	This dataset is collected as secondary data from the source . Sea level rise estimation, prepared by the IPCC, is based on ensemble of 19 Atmospheric Ocean and Global Circulation Models (AOGCM). It show projected changes in global average sea level under the SRES marker scenarios for the 21st century due to thermal expansion and land ice changes.
Quality	Global estimate of sea level rise is shown in Tabular format. It is to be noted that IPCC's Fourth Assessment report has been criticized for essentially discounting recent observations of substantial ice losses from the Greenland and Antarctic ice sheets in its projections of future sea level rise. More recent research, which has observed rapid declines in ice mass balance from both Greenland and Antarctica, finds that sea-level rise by 2100 is likely to be at least twice as large as that presented by IPCC AR4, with an upper limit of about two meters .
Completeness	Estimates of sea level shown here are global, local effect of the Bay of Bengal is not added or estimated here.
History of the dataset	The source of this dataset is Intergovernmental Panel on Climate Change (2007). "Projected global average surface warming and sea level rise at the end of the 21st century, Table SPM.3" . Projected global average surface warming and sea level rise at the end of the 21st century.. <a href="http://www.ipcc.ch/pdf/assessment-report/ar4/wg1/ar4-wg1-spm.pdf">http://www.ipcc.ch/pdf/assessment-report/ar4/wg1/ar4-wg1-spm.pdf</a> . Retrieved 2009-12-22.
Purpose of production	This data layer will be used for assessing the impact of sea level rise in the coastal zone of Bangladesh as well as facilitate the adaptation planning for combating the adverse impact of climate change.
Process description	This dataset is collected as secondary data from the source . Sea level rise estimation, prepared by the IPCC, is based on ensemble of 19 Atmospheric Ocean and Global Circulation Models (AOGCM). It shows projected changes in global average sea level under the SRES (Special Report on Emissions Scenarios) marker scenarios for the 21st century due to thermal expansion and land ice changes.

### Sample of Data

Scenarios	Assumptions	Average Value	Lower Limit (Temperature)	Upper Limit (Temperature)	Lower Limit (Sea Level Rise)	Upper Limit (Sea Level Rise)
Scenario A1B (A balanced emphasis on all energy sources)	General Considerations: 1) Rapid economic growth, 2) A global population that reaches 9 billion in 2050 and then gradually declines. 3) The quick spread of new and efficient technologies. 4) A convergent world - income and way of life converge between regions. Extensive social and cultural interactions worldwide.	2.8	1.7	4.4	21	48
Scenario A1F1 (An emphasis on fossil-fuels)	General Considerations: 1) Rapid economic growth, 2) A global population that reaches 9 billion in 2050 and then gradually declines. 3) The quick spread of new and efficient technologies. 4) A convergent world - income and way of life converge between regions. Extensive social and cultural interactions worldwide.	4	2.4	6.4	26	59
Scenario A1T (Emphasis on non-fossil energy sources)	General Considerations: 1) Rapid economic growth, 2) A global population that reaches 9 billion in 2050 and then gradually declines. 3) The quick spread of new and efficient technologies. 4) A convergent world - income and way of life converge between regions. Extensive social and cultural interactions worldwide.	2.4	1.4	3.8	20	45

**Metadata**

Data Type	Simple Table
Abstract	Flood regime in the coastal zone will be affected by climate change. Depth of inundation due to storm surge might be aggravated due to the increase in intensity of cyclones and projected rise in the sea level. This dataset shows the information regarding the possible vulnerability of population, houses, rice crops, roads and educational institutes in the coastal flood regime due to combined effect of storm surge and sea level rise.
Quality	This data layer contains risk exposure zones which are formed by grouping grid points into one of three inundation levels (0-1 m, 1-3 m, and more than 3m).
Completeness	This data layer covers the coastal region of Bangladesh where Population, Aus, Aman, Boro, Road and Educational institutions vulnerability is calculated.
History of the dataset	The source of the dataset is Economics of Adaptation to Climate Change (EACC) study carried out by the World Bank and as a part of the study cyclone-related risks under the climate change scenario were developed by the Institute of Water Modelling (IWM).
Purpose of production	This data layer will be useful in assessing the impact on the coastal region of Bangladesh as well as planning adaptation measures, especially for the water sector.
Process description	A set of five storms that span the entire Bangladesh coastline is simulated using 2-D mathematical models. Simulations of the 1974, 1988, 1991, and 2007 cyclones were considered so that these cyclones adequately cover the Sunderban coast, southwestern coast (Sunderban to Patuakhali), the Bhola and Noakhali coast in the Meghna Estuary, and the eastern coast (Shitakunda to Bashkhali). In addition, a fifth hypothetical track was simulated to cover the remaining Sandwip coast and the part of the Noakhali and Chittagong coasts at the central region of the Meghna Estuary. The inundation risk exposure for the climate change scenario is developed from simulations combining these five cyclones with the Bay of Bengal hydrodynamic model. Each of the simulations is based on the following three assumptions about the increasing intensity of an average 10-year return period cyclone brought about by climate change by 2050. 1) A rise in sea level of 27cm (UK DEFRA 2007). 2) An increase in wind speed by 10 percent relative to Cyclone SIDR. 3) Landfall occurs during high tide. Inundation risk exposure for each scenario is determined in three steps. First, the extent and depth of inundation associated with each cyclone (nineteen for the baseline and eight for the climate change scenario) is determined based on simulations using the cyclone model and the two-dimensional Bay of Bengal model. Second, for each grid point, the inundation depth results from each of the cyclone simulations for the scenario are combined together to determine the highest inundation depth for all simulated cyclones under that scenario. All of the simulations are based on the existing set of coastal protection infrastructures (embankments, and polders).

Name of Data layer: **Land Zoning of Coastal Area**

### Metadata

Data Type	Simple Table
Abstract	The spatial data layer represents land zoning of each union along with other attribute information. Land Zoning is establishing design standards for the landuse. It is important for encouraging the most appropriate use of land.
Quality	The data generation quality has been checked systematically and other information of this data layer totally depends on the source organization.
Completeness	The data layer covers 19 coastal district in Bangladesh.
History of the dataset	The source of this dataset is collected from Ministry of Land, Government of the People's Republic of Bangladesh under the Study of detailed costal land zoning with two pilot districts of plain land project, 2011.
Purpose of production	Present Information about Land Zoning of coastal area is to help to develop a best possible methodology for using the land such as agriculture, livestock, forestry, fisheries, industry and commercial development.
Process description	The data layer has been digitized from the published report titled 'Land Zoning Report, Study of detailed costal land zoning with two pilot districts of plain land project, 2011.' The data scanned and digitized as polygon shape file using standard GIS application. The projection system is Bangladesh Transverse Mercator (BTM).

Name of Data layer: **Baor Areas**

### Metadata

Data Type	Simple Table
Abstract	Baors are oxbow lakes, formed by dead arms of rivers. This spatial data layer represents the location of baor area in South West part of Bangladesh.
Quality	Locations of the Baor have been checked with help of the SoB Topographic maps and BWDB Water Body map. As the data layer was captured from satellite images so its accuracy and precision depends on the image processing quality as well as data capturing methods.
Completeness	This data layer covers mainly southwest part of Bangladesh.
History of the dataset	ISPAN (Irrigation Support Project for Asia and Nearest) was captured the perennial water bodies from SPOT multi spectral image for FAP 19. EGIS-I updated the data layer adding more information from SPOT image. ICRD has identified Baor from the waterbodies and updated this using LANDSAT 97 image and IRS image 2000 on ward image. Baor name has been collected from Topographic maps published by Survey of Bangladesh (SoB).
Purpose of production	To present the spatial distribution of Baor and to use the data layer for fishery resource assessment, management and other kinds of environmental monitoring, conservation purposes.
Process description	ICRD has updated the existing dataset with some missing information from SPOT 89 image, LANDSAT 97 image and IRS image. Topographic maps collected from Survey of Bangladesh (SoB) and Waterbody map collected from Bangladesh Water Development Board have also been used to update the data layer. LANDSAT and IRS images were in digital format and SPOT image was as printed copy. Georeference accuracy of LANDSAT TM image was 30 m. Scale of the SPOT multi spectral image was 1:50,000. The scale of SoB Toposheets and BWDB maps were 1:40,000 and 1:7920 respectively. Ground resolution of SPOT, LANDSAT TM, and IRS were 20m by 20 m, 30m by 30m and 6m by 6m respectively.

Name of Data layer: **Surface Water Quality in Khulna**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on surface Water Quality in Khulna.
Quality	The data layer fully complies with the published book of DoE.
Completeness	This data layer covers Khulna district.
History of the dataset	This data layer was collected from NWRD.
Purpose of production	This data layer was prepared to have an idea about the quality of surface water in Khulna. It can be used in different water related modelling and planning purposes.
Process description	ICRD collected this data layer from NWRD and stored it without any further modification.

### Sample of Data

Location	River	Time	Place	Temperature	pH	Chloride	Calcium Hardness	Hardness Total	Nitrate	Chromium	Orthophosphate	Remark
SIDE OF THE RIVER BHOIRAB NEAR CHORER HAT GHAT ( HIGH )	BHOIRAB RIVER	10:10 AM	CHORER HAT	28/29	7.1/7.1	360	-	-	-	-	-	-
MIDDLE OF THE RIVER BHOIRAB NEAR CHORER HAT GHAT ( HIGH )	BHOIRAB RIVER	11:00 AM	CHORER HAT	28/29	7.0/7.1	350	-	-	-	-	-	DO 7.00
MIDDLE OF THE RIVER BHOIRAB NEAR CHORER HAT GHAT (DEEP) ( HIGH )	BHOIRAB RIVER	12:00 PM	CHORER HAT	27/29	7.1/7.2	370	-	-	-	-	-	Temperature 21/29 , Chloride 370

Name of Data layer: **Tidal Water Level of BWDB**

### Metadata

Data Type	Simple Table
Abstract	This data layer contains data on daily tidal water level data from 1-4-1909 to 31-3-96 at 176 stations of BWDB.
Quality	Quality of this data set depends on the quality of collection and storing process of data collecting agency. Obvious errors have been deleted by NWRD.
Completeness	This data layer covers 176 stations of BWDB.
History of the dataset	This data layer was collected from NWRD.
Purpose of production	Daily water level (Tidal) data is collected for different Hydrological and Environmental analysis.
Process description	Collecting this data layer from BWDB, NWRD has checked the obvious errors and stored in an ordered format.
